these countries. Further, the 2013 Concept Participation of the Russian Federation in the BRICS stated that: Russian federation's long-term objectives as a member of BRICS is to gradually transform the group from a dialogue forum and base for a limited range of issues into a more strategic one for cooperation on crucial international political and economic problems.

The Russian Federation has given some suggestions to fulfill all these objectives as a member of BRICS.

(a) In the following two to three years, BRICS will try to boost its cooperation within BRICS in its present numerical composition.

(b) Russia will strive hard to bring a system of informal political and working mechanisms to bolster coordination in all areas of activity within BRICS. It will ensure all this in groups' work and the context of rotation of the Presidency and enhance dialogue on new directions and forms of cooperation (ibid.).[48]

(c) Russia will elaborate on the BRICS development strategy, defining the group's long-term objectives, operating principles, and cooperation mechanisms.

(d) As a member, Russia will start a dialogue on the ways, pace, and concrete forms of possible institutionalization of BRICS and consider the inter-alia, or the issue of creating a permanent secretariat (ibid.).[49]

(e) Russia will promote the group's external relations by dialogue with developing countries, the UN agencies, and regional organizations.

Likewise, the BRICS group's stature is immeasurable in Russian foreign policy objectives. It has given an intrinsic role to maintain the relations with the association's members and other countries irrespective of any region. The new Russian federation's 2013 foreign policy concept says that the current developments in international relations are characterized by profound changes in the geopolitical landscape, accelerated mainly by the financial and economic crisis. World affairs are in transition, the core of the difference in creating the polycentric international relations system. However, the change has large-scale implications globally and regionally
