Note 2020 and 2030 are predictions

So with this, the shift in the global economy was to take place soon in the international economy.

Later, when Xi Jinping came to the helm of affairs in late 2012, the Chinese growth rate forecast shifted and was restricted to 2023. Because that's when this fifth-generation leader's regime would end and when the sixth-generation leaders of the Chinese Communist Party would come into action. The latest report was prepared by the 'State Council's Development Research Center,' written by Liu Shijin in 2014. The data provides 170 percent growth of the nominal size of the GDP in 2013–2014 prices over the decade. They predicted that there would be inflation. Also, a gradual slow down of the annual GDP growth rate from 7.5 to 5.5 percent was expected. However, the Pandemic has affected the predictions, but the global organizations are still expecting positive growth from China. One interesting fact is that during the pandemic time, also China registered a positive growth rate when all other countries reported a negative growth rate.

During the 13th BRICS held in the virtual format on September 9, 2021, the Chinese President delivered a speech titled, 'Advance BRICS Cooperation to Meet Common Challenges Together.' He underscored that the Covid-19 Pandemic is still creating havoc around the world. The world seems bumpy, and the international order undergoes profound and complex challenges. Therefore, the BRICS group must coordinate world peace and
