emerging international relations. The below pages describe BRICS strengths and objectives in upcoming international ties (Table 2.10).

Table 2.10 BRICS population, health and environment data by 2014

Countries	Population mid-2015 (millions)	Births per 1000 population	Deaths per 1000 population	Infant mortality rate[13]	Total fertility rate[14]	Percentage of population below age 15	Percentage of population above 65	Percentage in world population
Brazil	204.5	15	6	19	1.8	24	7	2.8
Russia	144.3	13	13	9.3	1.8	16	13	2.1
India	1314.1	21	7	42	2.3	29	5	17.2
China	1371.9	12	7	12	1.7	17	10	19.7
South Africa	55.0	22	10	34	2.6	30	6	0.7

Source World Bank, *Population Reference Bureau*, 2015: World Population Data Sheet

Table 2.10 is based on the report by World Bank's population reference Bureau in 2015. As I explained the population and territory, it is considerable enough to be decisive in world affairs. Table 2.10 presents the health indicators of the BRICS countries, and it focuses on up to 2014 only. Table 2.10 says Brazil's birth rate per 1000 population was 15, Russia's was 13, India's was 21, China's was 12, and South Africa's was 10. The death rate in these countries is 6 for Brazil, 13 for Russia, 7 for India, 7 for China, and 10 for South Africa. The infant mortality rate in these countries is 19 for Brazil, 9.3 for Russia, 42 for India, 12 for China, and 34 for South Africa. Further, the total fertility of these countries is 1.8 for Brazil, 1.8 for Russia, 2.3 for India, 1.7 for China, and 2.6 for South Africa. The BRICS countries' percent of the total population is below 15 percent: Brazil's 24 percent, Russia's 16 percent, India's 29 percent, China's 17 percent, and South Africa's 30 percent. That means BRICS has a considerable population dividend in the coming period of international relations. Likewise, the percent of the population above 65 is the following: Brazil's is 7 percent, Russia's is 13 percent, India's is 5 percent, China's is 10 percent, and South Africa's is 6 percent.

Figure 2.4 illustrates BRICS's public expenditure share on education from its GDP. It is another crucial indicator of the country's growth rate in making it a significant power. This figure is according to BRICS Joint Statistical Statement in 2020 brought by BRICS countries.
