

SMART DESIGN
The living room opens into the deck (left) and dining (below); the designer with Sonakshi Sinha and Zaheer Iqbal (below left)

seamlessly into each other, much like two lives coming together.

Re-engineering the Layout

The first major architectural hurdle was structural. Sa'ada was conceived by combining multiple separate apartments into one expansive, continuous footprint. This required a complete gut-renovation and a radical reworking of the original circulation. So now, at the centre lies the energetic social heart of the home, an interconnected zone encompassing the living room, a sprawling dining area and a custom media room designed specifically as a creative rehearsal space. This common ground acts as the physical bridge between two personalities. As you move away from this central social axis, the architecture gently shifts. The layout unfolds into private wings, where individual suites are designed as hyper-personalised sanctuaries. By using hidden storage, integrated custom joinery and carefully calculated perspectives, we managed to soften the massive scale of the combined apartments, allowing open movement, interaction and privacy.
