

LIGHTING THAT RESPECTS REST

Light influences mood as much as architecture. Harsh illumination can interrupt the body's natural rhythm, while softer lighting encourages comfort and relaxation. Smartsense features ambient courtesy lighting that gently illuminates the bathroom during nighttime visits. The subtle glow improves visibility without disturbing the senses or disrupting sleep. It quietly enhances everyday wellbeing.

CLEANER WAY TO WELLBEING

A wellness-focused bathroom begins with confidence in cleanliness. Today's homeowners expect products that maintain hygiene while reducing contact. Smartsense combines touch-free operation, automatic flushing, UV nozzle sterilization, and advanced washing functions to create a cleaner environment. Multi-stage water filtration enhances every wash, while Bubble Shield Technology helps suppress odours, reduce splashes, minimize stains and deliver quieter operation. Together, these innovations keep the bathroom fresher and easier to maintain.

DESIGNED AROUND YOU

Wellness is deeply personal. Every individual has unique preferences, and the best technology adapts rather than demands attention. Smartsense allows users to store personalized settings for seat temperature, washing modes, water pressure, and drying functions, ensuring a familiar experience every time. Exclusive StepSense® Technology, available in the wall-hung collection, enables intuitive foot-activated operation for a touch-free interaction that combines convenience with enhanced hygiene.

LUXURY WITH PURPOSE

Modern luxury is increasingly defined by intelligence and responsibility rather than excess. Products are expected to deliver exceptional experiences while supporting sustainable living. Smartsense incorporates intelligent energy-saving modes that optimize power consumption whenever the system is not in use. For architects and interior designers, this reflects a shift toward technology that enhances comfort while respecting environmental responsibility.

THE FUTURE OF EVERYDAY WELLNESS

The bathroom has become a place where design, technology and wellbeing come together to support healthier daily living. The Somany Smartsense collection reflects this new philosophy through a seamless integration of intelligent innovation and refined design. Heated seating, personalized cleansing, UV sterilization, liquid aromatherapy, ambient courtesy lighting, StepSense® Technology, and energy-efficient performance work together to create a bathroom that nurtures comfort, hygiene, and peace of mind.

Since the future of luxury is no longer measured by what a space contains, but by how thoughtfully it cares for the people who use it.
