IIT Roorkee students are exploring new frontiers of architecture, including habitats even outside Earth

By **RIDHI KALE**

At a time when climate uncertainties and technological disruptions are advocating a serious rethink on how our cities are designed, the Department of Architecture and Planning at IIT Roorkee is already a step ahead. For the coming academic year, the institute is moving beyond traditional spatial design by introducing five era-defining themes.

Central to this is the debut of climate-responsive habitat design, training students to navigate sustainability challenges. For this, scholars will trace the evolution of vernacular architecture, take the best of it to bridge ancient passive techniques and modern smart configurations. The curriculum ex-
