CHRIST University's Bachelor of Computer Applications programme deploys cutting-edge tools that keep students in s hape for industry needs

By **AJAY SUKUMARAN**

In the age of artificial intelligence, agility has become the mantra of the Bachelor of Computer Applications programme at CHRIST (Deemed to be University), Bengaluru. The challenge is to retain focus on the fundamentals, while ensuring synchronicity with technological innovation. Earlier, the norm was to overhaul the curriculum every three years. "Now we will make changes yearly, at least in the final-year papers," says Deepthi Das, associate dean of the School of Sciences.
