PRESIDENCY UNIVERSITY JOINS GLOBAL AI FORCE, ESTABLISHES SCHOOL OF AI ACCELERATED BY NVIDIA

The landscape of Indian Higher Education just shifted gears. With the official launch of the Presidency School of Artificial Intelligence and Advanced Computing (PSAIAC), Presidency University, Bengaluru, has transitioned from preparing students for the current market to actively engineering the future of deep tech.

The crown jewel of this new school is an AI Centre of Excellence built in collaboration with NVIDIA. This is not just a regular computer lab; it is a high-performance computing powerhouse designed to give students and researchers the raw processing muscle needed to train complex neural networks and tackle real-world automation challenges.

Inaugurating the facility, distinguished scientist and former ISRO Chairman, Dr. K. Sivan, captured the essence of this milestone. He urged the youth to leverage this infrastructure to transition from traditional job seekers into visionary industry job creators, echoing Chancellor Dr. Nissar Ahmed's forward-thinking vision for a modern academia.

But a Powerhouse School needs a validating ground. To align to this massive academic leap, the University introduced BOHRAI (Bharat Open Innovation Hub for Robotics and AI), spearheaded by its Founding Chairman, Mr. Harry Radhak. Aimed at igniting the spirit of invention, BOHRAI committed an unprecedented ₹1 Crore Fund to finance the National Deep-Tech Hackathon Series, practically daring India's brightest young minds to turn their wildest code into viable world-changing solutions.

Beyond upgrading its Tech infrastructure, the University is also revolutionizing how it teaches. A Leadership Session moderated by Dr. Mohan Kankanhalli, Director National University of Singapore (NUS) AI Institute, mapped out exactly how AI will be integrated into the core curriculum and career development. Presidency University is not just introducing a new School; it is charting a course for the development of next generation Global Tech Visionaries.

CIT: INNOVATING TO MAKE STUDENTS FUTURE READY

Established in year 2007, Cambridge Institute of Technology (CIT) has adopted a very differential approach to education and teaching methodologies, in keeping with its ideology of creating future innovators and entrepreneurs. With over 4200+ students pursuing various fields of academics disciplines, CIT, from its inception, has gone a step beyond the assigned pedagogy to embrace experiential learning in connect with leading industries where the learnings are gleaned from actual industry requirements and direct interaction with industry experts.

While project-based modules, lab-centric teaching and continuous practical evaluation form the core, the gap between theory and practical solutions is bridged by continuous engagement with leading industries and their live projects.

Collaborations with companies such as Samsung, Synopsys, EOS, Wipro have initiated industry-sponsored laboratories and innovation centres to be set up within the campus.

CIT has also been actively involved in government-funded research projects through organisations such as MeitY and ISRO, resulting in over numerous patents and several research publications.

The institute secured the top position nationally at the MeitY-organised Cyber Security Grand Challenge 2.0 with a cash prize of ₹1 crore. Under the MeitY-supported Chips to Startup (C2S) programme, CIT also received a ₹4.94 crore grant for developing a reconfigurable Ground Penetrating Radar system, through which students and research staff designed over 20 chips across diverse applications while contributing across the complete chip development cycle.

It's student placement record speaks volumes of its academic rigour and experiential approach to learning combined with strong emphasis on research. With participation from over 200 companies, the latest graduating batch secured numerous placement offers, with the highest package reaching Rs 53.5 lakh per annum. The institute continues to expand its academic footprint to move towards a university model focused on strong integration between academics, industry and research.

D. K. Mohan,
Chairman, Cambridge group of Institutions.
