TOP 10 COLLEGES 2026 SCIENCE

	RANK 2026	RANK 2025	COLLEGE	CITY
↔	1	1	HINDU COLLEGE	New Delhi
↔	2	2	MIRANDA HOUSE	New Delhi
↔	3	3	HANSRAJ COLLEGE	New Delhi
↔	4	4	KIRORI MAL COLLEGE	New Delhi
↔	5	5	LOYOLA COLLEGE (AUTONOMOUS)	Chennai
↔	6	6	MADRAS CHRISTIAN COLLEGE (AUTONOMOUS)	Chennai
↔	7	7	SRI VENKATESWARA COLLEGE	New Delhi
↔	8	8	ST. JOSEPH'S UNIVERSITY	Bengaluru
↑	9	10	DEPARTMENT OF SCIENCES, CHRIST (DEEMED TO BE UNIVERSITY)	Bengaluru
↓	10	9	STELLA MARIS COLLEGE (AUTONOMOUS)	Chennai

STUDENTSPEAK

"As a student leader, researcher and environmental advocate, I realise Hindu has given me much more than an education...it has given me a platform to grow as a person and develop a deeper understanding of our subjects"

YUKTI KASODNIYA
BSc (Hons) Botany, Third year

Imparting lustre to Hindu College's growing reputation as a centre of research-driven, industry-oriented and interdisciplinary science education this year will be a set of novelties.

For one, the National Mathematics Resource Centre, which will serve as a hub for advanced learning, innovation and mathematical outreach. Take, also, the AI Lab and a planned series of workshops, conferences and such initiatives to help students understand the growing role of artificial intelligence across disciplines.

This year, the college is also expanding its specialised training facilities. The skill development centres (SDC) in Mushroom Cultivation and Plant Tissue Culture and the flagship initiative, 'Sustainable Perfumery: The Art of Crafting Fragrances & Nurturing Careers', will be part of this. The SDCs will provide students with hands-on experience in Biotechnology, agriculture, food systems and entrepreneurship, while the certificate programme in perfumery is said to combine Chemistry, Botany, sustainability and product development, creating exciting career pathways in a rapidly growing industry. Following the success of its first batch of certified perfumers, many of whom have secured placements or launched ventures of their own, the programme now has strong industry participation and exposure to international expertise.

Science students will benefit from a growing ecosystem of specialised research facilities, including the Materials Characterisation Lab, Polymer Research Lab, Drosophila Research Facility, Centre for Environmental Studies, Green Chemistry Networking Centre and Design and Innovation Lab. Technology integration will be another big priority. The upcoming AI Training and Innovation Lab will provide students across disciplines opportunities to engage with AI, data analytics and emerging digital technologies.

Another key focus in 2026 will be increasing experiential learning opportunities. With externally funded research projects in areas such as Biotechnology, environmental sustainability, public policy, healthcare innovation, climate studies and advanced materials, students will be integrated into research teams at an early stage of their academic journey.

The college will also promote interdisciplinary research through projects in areas such as biosensors, environmental toxicology, sustainable infrastructure, healthcare innovation and climate-related studies. These projects will also expose students to scientific challenges where AI-assisted analysis, predictive modelling and digital technologies play an important role. The biggest change, feel students, is that now undergraduates, too, will be part of research and innovation programmes, becoming active contributors from day one of their higher education. ■
