CUTTING EDGE OF INNOVATION

AI is not just a standalone specialisation at IIT Delhi but a foundational skill, driving a broader transformation in how students learn, collaborate and innovate

By **SHELLY ANAND**

ARUN KUMAR

As artificial intelligence reshapes industries, careers and classrooms, IIT Delhi is undertaking one of the most significant academic overhauls in its history. The institute's vision for 2026 is not about adding more programmes but about rethinking what students learn, how they learn and how they prepare for a rapidly changing world.

At the heart of this transformation is a stronger emphasis on interdisciplinary education. A new MSc programme in Cognitive Sciences brings together expertise from the School of Humanities and Social Sciences, the School of Artificial Intelligence and the institute's biological sciences ecosystem. By combining philosophy, logic, neuroscience and AI, the programme reflects IIT Delhi's belief that tomorrow's challenges will require knowledge that cuts across traditional disciplinary boundaries.

That philosophy is increasingly shaping the institute's broader academic framework. Undergraduate students now enjoy greater flexibility to take cross-disciplinary electives, pursue customised minors and switch majors more easily. The goal is to move beyond rigid academic silos and enable students to shape their own educational journeys, much like at leading global universities.

AI is central to this shift, with IIT

GURUSPEAK

"In the new academic session, IIT Delhi is introducing flexible, interdisciplinary and industry-linked initiatives to equip students for future careers, combining academic innovation, research strength and real-world relevance at the heart of learning"

PROF. SOMNATH BAIDYA ROY
Dean, Planning, IIT Delhi
