ज्ञानादेव तु कैवल्यम् :
A legacy that continues to evolve at Somaiya Vidyavihar University

At **Somaiya Vidyavihar University**, boundaries between disciplines are deliberately porous. Engineering students may study philosophy or music, management students may explore sustainability, while humanities students work alongside technologists, designers, & entrepreneurs. Guided by ज्ञानादेव तु कैवल्यम् - **Knowledge Alone Liberates** - the University combines scholarship with research, entrepreneurship, creativity, & real-world engagement.

This vision began in 1942, when **Shri Karamshibhai Jethabhai Somaiya** established the first school, believing education could transform individuals & society. Today, diverse disciplines coexist within one academic ecosystem.

120+ Basket Courses Across Disciplines:

Through 120+ credit-bearing Basket Courses, more than 4,000 students have explored subjects beyond their primary disciplines, spanning sports, literature, languages, nature, aesthetic arts, Indian knowledge systems, & spiritual traditions. An engineering student studying Indian philosophy or a commerce student choosing swimming or yoga remains firmly within the curriculum.

REACH, Orion Racing & Learning Beyond the Timetable:

Through **REACH** Fellowship, students live & work in villages, understanding local realities before developing community-led solutions. ***Orion Racing India,*** one of India's oldest Formula Student teams, has developed 20+ race cars & competed successfully in 30+ national & international competitions. Dharma Studies students similarly learn beyond classrooms by visiting historic Jain pilgrimage sites & studying inscriptions, architecture and living traditions first-hand.

From Measurement Sciences to Computational Science:

The University's 10+ specialised research centres advance discovery across science, technology & computation.

"At Somaiya Vidyavihar University, I see this purpose come alive through an ecosystem where disciplines intersect, research drives innovation, classrooms extend into communities, and students are encouraged to pursue knowledge wherever it leads. It is this environment that prepares our graduates not only for professions, but for a future in which the ability to connect ideas may prove as valuable as expertise itself".

PROF. AJAY KAPOOR
Vice Chancellor, Somaiya Vidyavihar University

The Shimadzu–Somaiya Centre of Excellence supports advanced analytical research, while the **Centre for Computational Studies & Simulations** enables interdisciplinary research using high-performance computing. Together, these environments demonstrate that knowledge is not only inherited but created through inquiry & experimentation.

riidl, Bioriidl, Incubator of Ideas:

Through **riidl** & **Bioriidl**, the University has supported over 380 entrepreneurs and facilitated INR 198 crore in total investments, creating one of India's leading university-based innovation ecosystems.

Ideas emerging from classrooms and laboratories receive mentorship, incubation support, infrastructure, funding opportunities, and industry connections to evolve into enterprises. Students and researchers work alongside entrepreneurs, scientists, mentors, and investors in an ecosystem that encourages experimentation, collaboration, and innovation.

The University's innovation culture comes together during the Somaiya Innovation, Sustainability and Impact Festival (SIIF), where research prototypes, startups, design projects, and conversations with industry leaders share the same platform, showcasing how research, entrepreneurship, and interdisciplinary collaboration translate ideas into real-world impact.

A Campus That Celebrates Every Passion:

On the same campus where storytellers gather at Afsana, artists exhibit through Immerse, and student-athletes compete at international events such as the FISU Worlds University Championship Squash, purpose-built infrastructure creates opportunities for every passion to thrive. Equipped with world-class sports facilities, including international-standard squash courts capable of hosting national and international championships, the campus is designed to support excellence in sport alongside culture, research, entrepreneurship, and the arts. Students of Dharma Studies undertake immersive study tours, while every opportunity exists within one shared academic community, making collaboration and exploration a natural part of the student experience.

Preparing Students for a World Without Boundaries:

Looking back, I find it remarkable that a philosophy centred on the liberating power of knowledge continues to find new expression with every generation. The disciplines have changed, the technologies have advanced, & the questions facing society have become more complex. Yet the purpose of education remains the same: to form character, strengthen the mind & increase the intellect.
