

also gathered pace at Punaura Dham, alongside the proposal to rename the surrounding district Sitapuram. In Munger, 15.01 acres of land have been leased to the Isha Foundation for ninety nine years at a token amount of ₹1 to establish a global cultural and spiritual centre.

To encourage religious tourism beyond the state, the Sindhu Darshan Teerth Yatra Financial Assistance Scheme 2026 provides permanent residents of Bihar with reimbursement of 50 per cent of travel expenses, up to ₹20,000, for pilgrimage to the Indus River in Ladakh.

Rural tourism is receiving equal attention through the Mukhyamantri Homestay Protsahan Yojana 2026, which offers capital subsidies of up to ₹11 lakh for establishing homestays, creating new livelihood opportunities for local communities.

The state has also introduced the Mukhyamantri Bihar Heli Tourism Seva Yojana, offering subsidised ten minute helicopter joyrides over Patna from ₹2,100 per seat. Luxury ferry and river cruise services on the Ganga are adding another dimension to Bihar's tourism experience by combining cultural performances with local cuisine.

Improved air connectivity is expected to provide a further boost. The approval of a direct Gaya to Bangkok flight, supported through Viability Gap Funding of ₹10.4 crore for up to twelve months, is aimed at strengthening Buddhist tourism and attracting visitors from Thailand and other countries in South East Asia.

Together, these initiatives position tourism not only as a means of preserving Bihar's rich cultural legacy but also as an important driver of employment, entrepreneurship and regional economic growth.

Infrastructure Driving Economic Transformation: Building the Networks That Power Growth

Infrastructure has emerged as one of the defining pillars of Bihar's development strategy. From highways and bridges to riverfront corridors, the state is investing in projects that promise to strengthen connectivity, improve logistics and unlock new economic opportunities.

Among the most ambitious is the Munger to Bhagalpur Marine Drive, also known as the Ganga Path Corridor. Spanning more than 82 kilometres across two phases with a combined investment of nearly ₹10,000 crore, the project is designed to improve freight movement while reducing logistics costs across eastern Bihar.

The government has committed to completing this corridor, together with the 39 kilometre Digha to Koilwar Marine Drive, within the next three years. Together, these projects are expected to create a continuous transport network along the Ganga, supporting trade, tourism and industrial expansion. The state's bridge building programme is equally ambitious. The 19.76 kilometre Kacchi Dargah Bidupur Bridge is India's longest six lane extradosed cable bridge, while the Aunta Simaria Bridge is recognised as Asia's widest six lane extradosed cable stayed river bridge.

Construction is also progressing rapidly on the 6.9 kilometre New Digha Sonepur Cable Bridge, developed under the NH 139W corridor at a cost of ₹3,005.98 crore.

Road connectivity is receiving similar attention. Through the Bihar State Road Development Corporation Limited, the government is expanding high capacity transport corridors to reduce freight costs and improve access between industrial clusters and rural districts.

Administrative approval exceeding ₹2,500 crore has already been granted under the Bihar State Highway IV Project for widening and strengthening roads across Madhubani, Sitamarhi, Darbhanga and several other districts. These upgrades are expected to improve connectivity, reduce travel time and support the seamless movement of people and goods across the state.

Together, these investments reflect a long term strategy that views infrastructure not merely as construction activity but as the backbone of economic growth, regional integration and improved quality of life.
