

of Hon'ble Prime Minister Shri Narendra Modi. Reflecting this national commitment, Bihar is accelerating its transition to clean energy and sustainable mobility through a series of ambitious initiatives.

At the centre of this effort is the ₹1,512 crore Rooftop Solar Programme, launched under the first phase of the PM Surya Ghar Muft Bijli Yojana, with a target of installing rooftop solar systems in 2.5 lakh Kutir Jyoti households by 20 November 2026. Chief Minister Samrat Choudhary has set an ambitious target of expanding the programme to 25 lakh households by November 2027. Under the scheme, beneficiary families receive 125 units of free electricity, while surplus power generated through rooftop solar systems is purchased by the government via Direct Benefit Transfer, creating an additional source of household income.
The programme is a key pillar of Bihar's broader clean energy strategy, aimed at reducing electricity costs, promoting renewable energy adoption and lowering carbon emissions. Over the coming years, the initiative is expected to benefit nearly 50 lakh families, placing Bihar among the frontrunners in India's solar energy transition.

The state's green agenda extends beyond solar power. Under the Bihar Electric Vehicle (Amendment) Policy 2026, the government has set a target of achieving 30 per cent electric vehicle registrations by 2030. A unified digital platform is being developed to integrate charging stations operated by multiple service providers, enabling users to locate facilities seamlessly through Google Maps.

Public transport is also undergoing a major transformation with the induction of nearly 400 electric buses. To support the growing EV ecosystem, fast charging stations are being established along major highways, at petrol pumps, hotels and dhabas, as well as in urban centres including Patna, Gaya, Muzaffarpur and Bhagalpur.

To encourage private investment, the government is offering capital subsidies ranging from ₹15,000 to ₹37,500 for AC charging units and ₹37,500 to ₹1.5 lakh for heavy duty DC fast charging infrastructure. Together, these initiatives reflect Bihar's commitment to building a cleaner, more energy secure and environmentally sustainable future while supporting India's larger transition towards renewable energy.

Designing the Cities of the Future: Planning Sustainable Urban Growth

As Bihar's economy expands, the government is also reimagining its urban landscape through planned townships, improved civic infrastructure and modern public services.

A key initiative is the development of 12 theme based greenfield satellite townships, including Patliputra, Magadh and Mithila. Built on a progressive land pooling model, the scheme allows participating landowners to receive 55 per cent of the fully developed land in return, ensuring that local communities remain partners in urban expansion.

The townships are expected to attract nearly ₹1 lakh crore in investment while easing pressure on existing cities and creating new centres of economic activity.

Urban infrastructure is receiving a similar boost under the AMRUT 2.0 Mission. Projects worth more than ₹730 crore have been approved for Bihar
