

Sharif, Hajipur, Begusarai and Saharsa, covering sewage treatment plants, water supply networks and modern sewerage systems that will benefit hundreds of thousands of households.

The government has also established the Bihar State Safai Karamchari Commission, sanctioning 11 posts to ensure its effective functioning. In addition, funds have been approved for the operation and maintenance of cremation grounds and burial sites on government land across rural Bihar, ensuring dignity and better civic services for local communities.

These initiatives reflect a broader vision of creating cleaner, better planned and more liveable cities while preparing Bihar for future urban growth.

Supporting Farmers and Cooperatives: Strengthening Bihar's Rural Economy

Agriculture continues to be the backbone of Bihar's economy, and the government has introduced several measures aimed at improving farm incomes and strengthening the cooperative sector.

Aligned with the national priority of strengthening farmers' welfare, Bihar will implement the Pradhan Mantri Fasal Bima Yojana from the Rabi 2026 to 27 season, replacing the state's existing crop assistance scheme. The move ensures that insured farmers receive compensation equivalent to their cultivation costs, with no upper limit on insured land, extending benefits to both small and large farmers.

The government has also cleared ₹42.99 crore in outstanding sugarcane dues for farmers in the Sasamusa region of Gopalganj district. The decision is expected to facilitate the reopening of the Sasamusa Sugar Mill, improving livelihoods while generating employment in the region. To strengthen agricultural marketing, the government is establishing the Bihar State Marketing Cooperative Federation Ltd, which will oversee the collection, storage, processing, transportation and marketing of products produced by cooperative societies.

Until the federation becomes operational, BISCOMAUN has been designated as the state nodal agency to sign agreements with the National Cooperative Export Ltd, enabling Bihar's cooperative products to access international markets and secure better returns for farmers. Together, these measures seek to improve agricultural resilience while integrating Bihar's rural economy with larger domestic and global markets.

Education and Healthcare: Investing in Human Capital

Recognising that long term growth depends on education and healthcare, Bihar has announced significant investments across both sectors. Under the Unnat Shiksha Ujjwal Bhavishya initiative, the government has announced that 211 new degree colleges will commence operations from 15 July 2026, which will improve the Gross Enrolment Ratio and extend quality higher education to students in underserved and rural regions of the state.

The state is also establishing two National Institute of Fashion Technology campuses, strengthening Bihar's position as an emerging centre for design education in eastern India. Alongside this, Model Schools equipped with smart classrooms, STEM laboratories and upgraded infrastructure are being developed in every block to improve the quality of school education.

Healthcare infrastructure is expanding at a similar pace. Patna Medical College is being developed into the country's largest medical college with a capacity of 5,462 beds. A dedicated Centre of Excellence for Autism in Patna will provide specialised diagnosis, therapy, training and research facilities, while a new medical college at Sitamarhi will be established as Maa Sita Medical College and Hospital, recognising the district's cultural and religious significance.

The government has also approved the Bihar Small and Medium Healthcare Establishments (Establishment and Registration) Regulations
