

Electric cars under Rs 30 lakh will be exempted from road tax and a registration fee

DELHI EV POLICY 2.0

Delhi's EV Policy 2.0 comes into effect from July 1 and will remain valid till March 31, 2030. Among the key measures is an exemption from road tax and registration fees for electric cars priced up to Rs 30 lakh. Only electric autorickshaws will be registered from January 1, 2027, while registration of new petrol and CNG-powered two-wheelers will end from April 1, 2028. Buyers of electric two-wheelers will receive purchase incentives of Rs 60,000 over three years. Electric three-wheelers will be eligible for incentives of up to Rs 50,000, while buyers of N1-category electric goods vehicles may get up to Rs 1 lakh. The policy also offers scrappage incentives of up to Rs 1 lakh. The government has earmarked Rs 15,000 crore for the policy over four years (Rs 7,000 crore for incentives and Rs 8,000 crore for charging infrastructure and tax concessions). Some 32,000 public EV charging points are also being planned.

VINFAST SET TO COMPETE WITH OLA AND UBER

Vietnam-based mobility company Green SM has entered the Indian market with the launch of its electric taxi service, Green SM Limo, in New Delhi. The launch coincided with World Environment Day, making India the company's fifth international market after Vietnam, Laos, Indonesia and the Philippines. The service has commenced operations across key parts of the Delhi-NCR region and will be expanded in phases. Green SM Limo uses the VinFast Limo Green, a seven-seat electric SUV developed specifically for commercial passenger transport. The vehicles are designed to cater to a range of mobility requirements, including daily commuting, airport transfers, business travel and family trips. Safety features include the company's Secure-to-Safe system, comprising interior and exterior cameras, AI-powered safety technology and emergency assistance buttons for both drivers and passengers. Drivers undergo training in electric vehicle operations, road safety and customer service before joining the platform. Customers can book rides through the Green SM mobile app on Android and iOS, contact the company's hotline or hail vehicles directly within operating areas. Alongside the launch, Green SM also inducted five Indian companies into its Green Alliance Frontier initiative, a global platform that promotes collaboration on sustainable mobility.
