constitute the bedrock of a progressive society. Madhya Pradesh has registered monumental progress through planned interventions and technology-driven surveillance.

- **Significant Decline in MMR:** According to the latest indices from the Government of India's Sample Registration System (SRS), Madhya Pradesh's Maternal Mortality Ratio (MMR) has recorded a steep decline, dropping from 173 to 135 per 100,000 live births. This remarkable 22% reduction reflects a pace of progress double that of the national average.
- **Tech-Driven Maternal Care:** Digital intervention plays a defining role in this transformation. The 'ANMOL 2.0' portal ensures real-time tracking of high-risk pregnancies, while the AI-powered WhatsApp chatbot 'Suman Sakhi' delivers automated clinical counsel and support directly to over 1.68 lakh women.
- **Preventive Shields for Young Girls:** Emphasizing preventive healthcare, the state has successfully administered the HPV vaccine to more than 7.63 lakh young girls in record time, effectively safeguarding the future generation against cervical cancer.

'PM SHRI AIR AMBULANCE': REDEFINING CRITICAL CARE AND EMERGENCY RESPONSE

In the vast geographical landscape of Madhya Pradesh, the 'PM Shri Air Ambulance Service' has emerged as an unprecedented lifeline, bridging the critical 'Golden Hour' gap to save lives in remote and inaccessible terrains.

- **A Flying Intensive Care Unit:** Orchestrated from a centralized 24/7 command center in Bhopal, this premium service maintains a fixed-wing aircraft (Beechcraft King Air C-90) and a multi-engine helicopter (AW-109) on permanent standby. Functioning essentially as 'Flying ICUs', these aircraft are fully integrated with advanced ventilators, telemetry, and sophisticated life-support systems.
- **Streamlined Digital Operations:** The dedicated 'AIR AMBULANCE MP' portal and mobile application ensure seamless digital tracking and instantaneous administrative clearances, optimizing response times when every second counts.

- **Democratizing Air Evacuations:** Having successfully executed over 140 life-saving missions, this elite medical transit service is provided completely free of charge to Ayushman cardholders, effectively shattering economic and geographical barriers to deliver world-class emergency care.

TRANSFORMING HEALTHCARE HORIZONS THROUGH ADVANCED TECHNOLOGY

Aligning with global paradigms in medical science, Madhya Pradesh is systematically eradicating regional dependence on distant metropolitan centers for specialized diagnostic and therapeutic treatments.

- **Advanced Tertiary Care Infrastructure:** Specialized Bone Marrow Transplant (BMT) units are now operational at the medical colleges in Indore and Jabalpur, while advanced MRI systems and cutting-edge Dual-Energy Linear Accelerators for oncological care are being installed across Gwalior, Rewa and Bhopal.
- **Bridging the Urban-Rural Divide:** The deficit of localized specialists in rural zones has been brilliantly mitigated via the 'e-Sanjeevani' telemedicine platform, linking 17 premier state medical colleges directly with primary health centers for video consultations.
- **A Nation-Leading Proactive Health Model:** Shifting from reactive treatment to proactive screening, Madhya Pradesh leads the nation in Sickle Cell Anemia screening with over 1.27 crore evaluations, complemented by the extensive screening of more than 1.28 crore adults under the 'Healthy Liver Mission' (Swasth Yakrit Mission).

FROM SERVICE TO EMPATHY: THE DIGNIFIED AND HUMANE FACE OF PUBLIC HEALTH

Transcending conventional brick-and-mortar infrastructure, Madhya Pradesh's medical apparatus operates with deep institutional empathy toward its citizens across every stage of life.

- **Dignity in Moments of Loss:** To accord respect during profound grief, a well-structured network of 148 specialized vehicles offers the 'Free Hearse Van Service' (accessible via toll-free number 155334), supporting over 20,000 families during their times of loss.
- **Dedicated Geriatric and Home Care:** For senior citizens, dedicated 10-bed Geriatric Wards have been reserved across all district hospitals, while the pioneering 'HOPE' program delivers professionally trained home-nursing and clinical care to completely immobile elderly patients.
- **The Promise of 'Ayushman Vaya Vandana':** The rapid rollout of this initiative has extended a robust free-treatment safety net to over 14.85 lakh elderly citizens, ensuring financial security against medical emergencies in old age.
- **Guard of Honor for Organ Donors:** In a superlative gesture of societal gratitude, the state government has instituted a historic mandate to accord a full state funeral with a 'Guard of Honor' to organ donors—an empathetic move that has already inspired more than 1,700 citizens to take the solemn pledge of organ donation.

From the strategic expansion of medical academia to cutting-edge aero-medical assets, digital breakthroughs and deeply empathetic welfare programs, Madhya Pradesh has demonstrated a masterful transformation of its public health matrix. This journey is not merely about augmenting infrastructure; it is about embedding human dignity, self-reliance and absolute inclusivity into the structural fabric of the healthcare system, ensuring that every citizen thrives in a healthier, empowered tomorrow.
