

Today's world is technology –driven and integral for futuristic development for which future-ready skills in AI, coding, green tech, and entrepreneurship, vocational and digital education is getting undivided attention. The economic growth also hinges on a healthy population. For ensuring accessible and affordable healthcare, various health programmes have been launched such as Ayushman Bharat reducing out-of-pocket health expenses, primary healthcare, and mental health, focus on nutrition, sanitation and preventive care.

The impact of environment is distinct in the repercussion on all living things including human beings. India has pledged transitioning to net-zero emissions by 2070 as part of its commitment to the United Nations Framework Convention on Climate Change (COP 26) in November 2021. Exploring and accelerating solar, wind, and bioenergy projects, promoting circular economy and green lifestyles are all aimed at fostering and developing sustainability, clean and renewable energy.

The campaign for 'Bold Vision for a Bright Future' is safe-guarded and promoted through good governance and citizen participation. Backed by political will, democratic institutions and transparency are being strengthened. Grassroots participation through Jan Bhagidari (people's movement) and empowering youth, women, and local governance structures are fundamental to dignity, equality and equal opportunities for growth. "Youth power is both the agent of change and also the beneficiaries of change," stated PM Modi. Factors such as youth innovation and entrepreneurship, community-led sustainability efforts, public-private partnerships, volunteerism and civic engagement and involvement of diaspora in India's growth story are crucial for attaining a developed and flourishing India by 2047.

The bold vision for a brighter, inclusive future encapsulates India's determination to harness its vast human potential, cultural richness, and technological capabilities to emerge as a global economic power. Taking the lead are top financial institution who are assisting businesses by offering financial programs, advisory services, and strategic backing throughout the value chain of diverse enterprises. For example, the Ubharte Sitaare Programme (USP) of EXIM Bank and directly supports the "Viksit Bharat" (Developed India) theme by fostering export-led growth, aiming to transform Indian MSMEs into global champions. By providing equity, debt, and technical assistance to high-potential, innovative companies, the programme boosts manufacturing competitiveness, expands the export basket, and creates employment, which is crucial for achieving a developed economy by 2047.

By empowering its citizens and investing in people-centric growth, India is set to become a developed nation. "The roadmap of progress will not be decided by the government alone but by the nation. Viksit Bharat has to be built only through Sabka Prayas," emphasised PM Modi.

IFFCO

Nurturing the Soil, Securing Farmer's Future

Soil is the foundation of rural India. It is not merely a medium for cultivation, it is the very source of food security, farmer prosperity, and national resilience.

IFFCO's approach of Integrated Nutrient Management combines organic inputs, chemical fertilisers, and biological agents in purposeful balance to build long term soil fertility, sustain crop productivity, and improve nutrient efficiency simultaneously. India's Soil Health Card scheme has distributed over 25 crore cards, empowering farmers with nutrient specific recommendations for their land.

At IFFCO, innovation has always been a priority. Nano Urea, the world's first nanotechnology based liquid nitrogen fertiliser, delivers far superior nutrient use efficiency over conventional urea, enabling better nitrogen absorption, reducing waste, improving yields, lowering farmer costs and cutting the overall carbon footprint. Indigenously, IFFCO has developed a full suite including Nano DAP, Nano NPK, Nano Zinc and Nano Copper, covering the complete spectrum of crop nutrition.

Within this integrated framework, Sagarika, our seaweed derived bio-stimulant, enriches soil microbial activity and strengthens natural plant resilience. DharAmrut, our amino acid and trace element complex, further enhances nutrient uptake, photosynthesis and stress tolerance at the cellular level.

The path forward is to unite modern science with soil wisdom. That is what balanced, integrated nutrient management makes possible.
