the manufacturing operation. They are at the centre of it, hands on, technically fluent, fully embedded in the production processes that keep Landmark Crafts Ltd ISO 9001 certified, CRISIL rated, and Dun & Bradstreet accredited manufacturing lines running with the precision that clients across construction, infrastructure, electrical installation, and fabrication demand every single day.

They are, by every account and every industry verification, the only women in India holding hands-on managerial roles in fastener manufacturing. That distinction is not one they sought for its own sake. It is simply the consequence of showing up, learning completely, and refusing to treat the factory floor as a space that belonged to someone else.

"When I first came to this floor, I had to learn everything from scratch," says Rachna. "The machines do not care whether you are a man or a woman. What they respond to is understanding, respect for the process, and attention to the detail the product demands. That is what I bring every single day, and that is what this floor expects of anyone who stands on it."

The learning curve was steep. Fastener manufacturing rewards accumulated technical knowledge: understanding the metallurgical properties of materials, the mechanical behaviour of tooling, the quality parameters that determine whether a self-drilling screw will perform under load in a real construction application or fail at the worst possible moment. It is not a floor that forgives shortcuts.

"People were surprised at first," says Ruby Sharma. "But surprise fades quickly when the numbers are good. Quality is quality. Output is output. Gender does not assemble a screw."

That quiet, unassailable logic has defined both women's trajectories at Landmark Crafts Ltd. On the shop floor today, their authority is not questioned or qualified. It is simply the operating reality of a manufacturing environment that measures itself by what it produces and trusts the people whose competence has proven itself on exactly those terms.

For Pankaj Lidoo, Managing Director of Landmark Crafts Ltd, their presence on the floor is not incidental to the company's story. It is central to it. "Rachna and Ruby represent the kind of workplace Landmark Crafts Ltd has deliberately chosen to build," he says. "We believe, without reservation, that the best talent in this country is not defined by gender, and that a manufacturing culture which genuinely empowers women produces better outcomes for everyone in the organisation."

That belief, however, is only as strong as the environment built around it. Women do not thrive in manufacturing floors through conviction alone. They need safety, dignity, mentorship, a clear path of professional growth, and the institutional confidence that their contributions will be recognised on the same terms as anyone else's. At Landmark Crafts Ltd, that infrastructure of inclusion has been built and maintained with the same rigour applied to every other operational standard the company holds itself to.

"Our responsibility as an organisation," Lidoo says, "does not end at the product we manufacture. It extends to the people who manufacture it, and to the message their presence sends to every young woman in this country who has been told that the factory floor is not her place. Rachna and Ruby have answered that argument more powerfully than any policy statement ever could."

India's manufacturing sector is searching urgently for its next generation of skilled, technically fluent, committed talent. Gender is not a variable in that equation. Competence is the only currency that counts.

At Landmark Crafts Ltd in Panchkula, on a shop floor that hums with decades of accumulated manufacturing knowledge, two women are making that argument in the most persuasive way available to them. Not with words. With output. With quality audits passed. With production targets met. With machines that run because the people who manage them understand them completely.

The fastener holds the structure together. Rachna and Ruby Sharma are holding something larger together - the argument, against every convention that said this floor was not theirs, that it is.

People were surprised at first. But surprise fades quickly when the numbers are good. Quality is quality. Output is output. Gender does not assemble a screw.
