The Woman Who Is Building India's Infrastructure Future

Behind many of the world's landmark infrastructure projects are engineering consultancies quietly shaping economic growth and urban transformation. The Mumbai Ahmedabad High Speed Rail, metro systems across Mumbai, Nagpur, Chennai, Bengaluru, Surat, Indore, Bhopal and Pune, railway line in Uganda, Tanzania, expansion of Pattaya Airport in Thailand, and road projects across Liberia, Mozambique, Timor-Leste, Uzbekistan and many more countries are all part of the growing portfolio of Consulting Engineers Group (CEG) and the woman expanding that portfolio across new continents is Harshita Jain.

Founded in 1984 by Vishwas Jain, CEG has grown from a visionary Indian enterprise into one of the country's largest Indian owned infrastructure consultancies, reflecting the rising global competitiveness of Indian engineering. Today, the company operates in more than 30 countries, delivering projects with an aggregate construction value exceeding ₹3 lakh crore.

A Civil Engineering graduate from the University of Bath and an Executive Management alumnus of the London School of Economics, Harshita joined the family business not as an heir waiting to inherit, but as a professional determined to expand its global ambitions.

"For me, infrastructure is far more than a profession," she says. "Every road, railway, metro system or bridge has the power to transform communities and unlock opportunities for generations. Representing Indian engineering on the global stage and contributing to that transformation continues to inspire me every day."

Over the past decade, Harshita has witnessed and contributed to CEG's remarkable evolution. The company has expanded significantly in scale, technical capabilities and international presence while remaining committed to the values of quality, integrity and engineering excellence that have defined it for more than four decades. For her, success is measured not only by business growth but by the lasting impact of infrastructure that strengthens economies, enhances mobility and improves lives.

Harshita Jain
Joint Managing Director of
Consulting Engineers Group

As a second-generation leader, Harshita views her role as building on CEG's legacy while preparing it for the future. Her focus is on expanding into new markets, embracing digital engineering and innovation, and demonstrating that Indian consulting firms possess the expertise and execution capabilities to lead some of the world's most complex infrastructure projects.

As India celebrates Independence Day and advances towards the vision of Viksit Bharat, Harshita's journey reflects the confidence of a new generation of Indian leaders, professionals who have chosen to return home, build globally competitive enterprises, and position Indian engineering not as a supporting partner, but as a trusted leader delivering world-class infrastructure across continents.
