Built in Silence, Felt Across the World

When a young Maharashtrian chemist started a bulk drug company in Ratnagiri's industrial hinterland in 1987, nobody predicted that the medicine in your cold and allergy tablet would, three decades later, trace its journey back to his factory floor.

Dr. Satish Wagh
Founder, Supriya Lifescience Ltd.

In the pharmaceutical world, the names that make headlines are typically those of the finished-dose brands—the multinationals, the listed companies with investor days and glossy product campaigns. What rarely gets told is the story of the molecule itself: where it was made, by whom, and at what standard. That invisible story is, in many ways, the more important one. And for the anti-histamine APIs that relieve an estimated one in three allergic conditions treated globally, that story leads to one address: Lote Parshuram, Ratnagiri, Maharashtra, and a first-generation Maharashtrian entrepreneur named Dr. Satish Wagh.

Supriya Lifescience was founded in 1987 with a simple, disciplined conviction: that Indian chemistry, practiced with ethical rigour and world-class quality standards, could serve the entire world. Over four decades, Dr. Wagh has turned that vision into reality, marking his progress with every regulatory win and successful batch.

Today, Supriya Lifescience is the world's largest manufacturer of anti-histamine APIs. It operates across 120 countries. It serves over 2,000 customers. It holds approvals from US FDA, EUGMP, Health Canada, PMDA Japan, ANVISA, and over 33 regulatory authorities globally. It carries a portfolio of over 40 active pharmaceutical ingredients across anti-histamine, anti-allergic, anaesthetic, vitamin, and anti-asthmatic therapeutic segments. Its revenue stands at over INR 700 CR** in FY25 — with a 30%-plus EBITDA margin that is, in Dr. Wagh's own words, "not what a lot of the other API players are doing" because Supriya operates in niche segments where quality commands a premium. And in a pharmaceutical industry defined by leverage and acquisition cycles, Supriya Lifescience carries zero debt.

"With a vision to conduct ethical business, provide employment opportunities, and contribute to the growth of the economy, I started this company," Dr. Wagh has said. That statement, stripped of corporate language, is the architecture of everything Supriya has become. Over 1,000 people employed across facilities in Lote Parshuram and Ambernath. CSR investments targeting ₹10 crore annually—funding cancer treatment and kidney transplants through the Satish Wagh Foundation extends deeper into making a difference in the lives of the community in the areas of education, healthcare, rural development, wildlife conservation and community supper.

The IPO came in 2021 — oversubscribed 75 times. In 2024, in a transition that defines true legacy-building, the company entered a new era of leadership as founder Dr. Satish Wagh transitioned to Executive Chairman, entrusting the organization's trajectory to Dr. Saloni Wagh and Shivani Wagh in their respective roles as Managing Director and Joint Managing Director.

He has built an institution — one that will outlast any individual tenure.

"When one has a deep desire for something," Dr. Wagh said, "the universe aligns to help make it a reality."

He would know.
