CHRONOGRAPHS

FLEX APPEAL »

TAG Heuer

Monaco Evergraph

TAG Heuer has spent decades making chronographs faster. The Monaco Evergraph asks a question: what if the mechanism bent instead of pivoted? Inside the 40 mm Grade 5 titanium square, calibre TH80-00 replaces levers with flexible components, cutting friction and wear. It runs at 5 Hz, measures tenths, stores 70 hours and carries COSC papers. The smoked dial lets the engineering perform. This is not heritage warmed over. It is the Monaco finally behaving as futuristic as it has always looked.

« VANISHING ACT

Parmigiani Fleurier

Tonda PF Chronographe Mystérieux

Parmigiani's Tonda PF Chronographe Mystérieux treats elapsed time like a discreet affair. At rest, rhodium-plated hands tell time. Press the monopusher at 7 o'clock and they jump to zero as chronograph counters, revealing rose-gold hands beneath. The trick is clever, theatrical and, yes, less intuitive than three subdials. That is beside the point. A mineral-blue Grain d'Orge dial, platinum bezel and micro-rotor calibre PF053 make this 40 mm watch a magic act for people who find normal luxury too obvious.
