TAILORED TIMING

Cartier

Santos de Cartier Chronograph, 2026 Generation

The 2026 Santos Chronograph has discovered tailoring. Cartier shrinks the case from XL to a friendlier 39.8 mm width, trims the thickness to 11.6 mm and restores conventional pushers at 2 and 4 o'clock. The revised dial is more balanced, the Roman numerals remain Parisian, and calibre 1904-CH MC keeps its column wheel and vertical clutch. Steel, two-tone and yellow-gold versions retain QuickSwitch convenience. It is no revolution. It is the same square swagger after a good fitting.

INKED HISTORY

Montblanc

Star Legacy Nicolas Rieussec Chronograph Limited Edition 821

Montblanc returns to the horse race where Nicolas Rieussec first inked elapsed time in 1821. Across the brown sfumato dial, four jockeys charge through Paris; below, twin rotating discs do the timing. The 43 mm steel case houses monopusher calibre MB R200, with dual time and 72 hours of reserve. Limited to 821 pieces, even the strap lining carries an 1821 Paris map. History lesson, yes, but one with excellent illustrations.
