TOURBILLIONS

GRAVITY, INTERRUPTED

CHAIN-REGULATED TORQUE AND RAPID ROTATIONS TURN WATCHMAKING'S WAR ON GRAVITY INTO THEATRE.

CHAIN REACTION

Breguet

Tradition Tourbillon 7047

Few watches make their engineering this indecently visible. Created for the tourbillon patent's 225th anniversary, the platinum Tradition 7047 turns Breguet's caliber 569 into dial-side theatre. A 232-link fusée-and-chain transmission evens out torque as the twin barrels unwind, feeding a vast one-minute tourbillon fitted with a silicon Breguet spring. For 2026, the 499-part mechanism is washed in Bleu de France, from the titanium cage to 77 individual chain links, while a glacier-blue mainplate sharpens the industrial drama. The tiny grand feu enamel time dial almost feels like an afterthought. Quite right, too. This watch does not politely explain the hour. It demonstrates why Breguet still owns the tourbillon conversation.
