WATCH SPECIAL

TOURBILLIONS

DIVINE VELOCITY

Jacob & Co.

God of Time

Most tourbillons take a minute to complete a lap. Jacob & Co.'s takes four seconds, making the God of Time less a regulator than a mechanical dare. Caliber JCAM60 uses a featherweight 0.27-gram titanium cage, four mainspring barrels and a constant-force buffer to control the fierce energy required, yet still delivers 60 hours of reserve. Above it, a hand-sculpted rose-gold Chronos broods over blue aventurine inside an Ionic-column case. Subtle? Not remotely. But when a watch sets a genuine speed record, understatement would feel almost dishonest.

THIN AIR

Arnold & Son

Ultrathin Tourbillon Onyx Edition

Thinness is the complication Arnold & Son refuses to shout about. Its hand-wound A&S8300 is only 2.97 mm thick, yet fits a flying tourbillon, twin barrels and a 100-hour reserve into an 8.4 mm watch. The sextant-shaped carriage and anchor counterweight salute John Arnold's marine chronometers, while an engraved gold bridge floats against black onyx. This is technical theatre in an evening dress, and proof that a tourbillon can command a room without occupying half of it.
