GOLDEN DISRUPTION

Swatch x Omega

Mission to the Moon 1969

Swatch transforms the MoonSwatch into something between a historical tribute, a fashion drop and a playful piece of precious-metal provocation. The familiar 42 mm Speedmaster silhouette is rendered in matte black Bioceramic, creating a dramatic setting for components made from 18-carat Moonshine Gold. The gold dial, hands, crown and pushers collectively weigh 11 grams and were produced using Omega spare parts dating from 1969, the year of the first Moon landing. Period typography, black-lacquered indexes and an "OM" marking for or massif, or solid gold, deepen the vintage references. An individual number is picked out in gold on the case flank, while the black rubber strap conceals a gold-coloured lining. Beneath the theatrics sits a practical quartz chronograph with a tachymeter scale. Limited to 1,969 pieces and offered through an application process, it turns the Moonwatch's history into a sharply styled exercise in high-low dressing.
