WATCH SPECIAL

COMPLEX PERPETUALS

ETERNAL MECHANICS

SHAPED MOVEMENTS, SHIFTING FREQUENCIES AND GLOWING CALENDARS MAKE ETERNITY UNCONVENTIONAL.

AFTER DARK

A. Lange & Söhne

Lange 1 Tourbillon Perpetual Calendar "Lumen"

A perpetual calendar this serious has no business glowing like a nightclub, which is precisely why the Lumen works. Beneath its UV-permeable, smoked-sapphire dial, every calendar indication remains readable after dark: outsize date, retrograde weekday, peripheral month, leap year and moon phase with day-night display. Calibre L225.1 advances them instantaneously, even leaping directly from 28 February to 1 March, while concealing a stop-seconds tourbillon on the reverse. Limited to 50 platinum pieces, it is Saxon watchmaking loosening its collar without lowering its standards.
