

LUMINOUS LOGIC

IWC

Big Pilot's Watch Perpetual Calendar Ceralume ref. IW505801

IWC has made luminosity structural. Super-LumiNova pigments are mixed directly into the ceramic of the 46.5mm case, while the dial and rubber strap also emit a blue glow in darkness. The result resembles a piece of lunar equipment rather than a conventional luxury watch. Calibre 52616 adds genuine substance, pairing a seven-day power reserve with day, date, month, year and Double Moon displays. Limited to 250 pieces, it is gloriously excessive, technically rigorous and virtually impossible to lose in a darkened room.

MALACHITE MUSCLE

Audemars Piguet

Royal Oak Selfwinding 41mm in Yellow Gold with Malachite Dial

Audemars Piguet abandons the familiar Tapisserie dial for a polished slab of malachite, allowing its irregular green bands to flow uninterrupted by even a date window. Set within the angular architecture of a 41mm yellow-gold case and integrated bracelet, the stone looks opulent but pleasingly unruly. Gold hands and markers preserve the monochromatic richness. Automatic calibre 4309 provides central seconds and a 70-hour power reserve, giving this extravagantly dressed Royal Oak the dependable mechanics of a serious sports watch.
