

Mosquitoes are the world's deadliest animal, causing over 700,00 to 1 million deaths annually. However, the reality is that large number of people today still see mosquitoes as just sleep irritants and not vectors of diseases like Dengue, Malaria, Chikungunya, Filaria, etc.

With dengue becoming the fastest spreading tropical disease in the world, ALL OUT has launched a SAATH LADENGE DENGUE SE initiative to drive awareness, promote education, and create on-ground impact in the fight against dengue. Partnering with India Today Group/Aajtak, ALL OUT's initiative is also meant to serve as a platform for various stakeholders to come together and find solutions. The fight against dengue cannot be any individual household's fight alone, there is an urgent need at the national level to drive discussions on Dengue, create awareness and take actions to counter its rise.

How to prevent DENGUE

Preventing dengue mainly involves reducing mosquito exposure and eliminating mosquito breeding sites. There is currently no specific treatment for Dengue, so prevention is key. Effective preventive measures include:

- Wear light-coloured clothes that cover as much of your body as possible
- Long-sleeved shirts, long pants, socks, and shoes are your best friends in the fight against mosquito bites
- Installing screens on windows and doors
- Using mosquito nets while sleeping in endemic areas
- Eliminating stagnant water in flower pots, gutters, and containers
- Using Mosquito repellents inside the home for continuous protection at night and during the day
