

Yogi Government Strengthens Uttar Pradesh's Healthcare Landscape

Before 2017, Uttar Pradesh grappled with inadequate healthcare facilities, a shortage of doctors, limited opportunities in medical education, and dependence on other states for specialised treatment. However, over the past nine years, the pace of investment, expansion, and institutional development in the health sector under the leadership of Chief Minister Yogi Adityanath has sought to transform both the face and the future of healthcare in the state. From the expansion of medical education and super-speciality treatment facilities to the strengthening of AYUSH services, wider health insurance coverage, and enhanced emergency medical care, Uttar Pradesh has emerged as a leading example of one of the country's largest healthcare infrastructure expansion programmes.

One of the most significant aspects of the Yogi Government's healthcare policy has been the rapid expansion of medical education. At present, Uttar Pradesh has a total of 83 medical colleges in operation, including 45 government medical colleges, two ESI medical colleges, and 36 private medical colleges. Through these institutions, 59 districts of the state are now covered by medical colleges. The government's objective is to ensure the availability of quality medical education and healthcare services in every district. To achieve this goal, a policy has been implemented to establish medical colleges in the remaining 16 districts through the Public-Private Partnership (PPP) model. The increase in MBBS seats stands as the strongest testament to this transformation. Currently, more than 5,700 MBBS seats are available in government medical colleges, while private medical colleges offer over 7,900 seats. In addition, 350 seats have been created in three new medical colleges established under the PPP model. For super-speciality medical education, 305 seats have also been made available. Postgraduate medical education has witnessed equally remarkable progress. The number of MD, MS, and Diploma seats in government institutions has increased from 900 to 1,871, while 4,995 postgraduate seats are now available in the private sector. As a result, students from Uttar Pradesh have become less dependent on other states for higher medical education.

Nationally Recognised Medical Institutions

Medical institutions in Uttar Pradesh are steadily earning national recognition for excellence in healthcare and medical education. The Atal Bihari Vajpayee Medical University in Lucknow is emerging as a significant centre of medical learning. Meanwhile, the AIIMS institutions operating in Gorakhpur and Raebareli are providing advanced healthcare services to patients across eastern and central Uttar Pradesh. King George's Medical University (KGMU) secured the eighth position nationally in the medical university category and the seventh position in the dental category in the NIRF Rankings 2025. The university has also been awarded the highest NAAC A++ accreditation. Similarly, the Sanjay Gandhi Postgraduate Institute of Medical Sciences (SGPGI) enhanced the state's prestige by securing the fifth rank in the country in the NIRF Rankings 2025. The institute has likewise received NAAC A++ accreditation. The Yogi Government has not only focused on increasing the number of medical colleges but has also placed special emphasis on expanding advanced healthcare facilities. At SGPGI, a Diabetes Centre and a 500-bed Advanced Paediatric Centre have been established. Simultaneously, the process of setting up a Quaternary Healthcare Centre at the institute is progressing rapidly. At Dr Ram Manohar Lohia Institute of Medical Sciences, Lucknow, work on an Advanced Neurosciences Centre, along with kidney, liver and bone marrow transplant facilities, has been completed. As a result, patients suffering from serious and complex illnesses now have less need to travel to Delhi, Mumbai, or other metropolitan cities for specialised treatment. At Kalyan Singh Super Speciality Cancer Institute, Lucknow, a Centre for Advanced Molecular Diagnostics and Research has been established for cancer care. The institute already has a functional 220-bed facility, providing cancer patients access to state-of-the-art treatment.

Telemedicine and AYUSH services gain momentum

Significant steps have also been taken to integrate technology with healthcare delivery across the state. Through teleconsultation and teleradiology services, SGPGI is providing specialist consultations to renowned institutions in Uttarakhand, Rohtak in Haryana, Odisha, and
