We take you inside one of India's best fenestration solutions, the all new Eternia Experience Studio by the Aditya Birla Group

Bureau Report

South Delhi's bustling home improvement and design district just got a serious structural upgrade that is turning heads. Hindalco Industries, the metals powerhouse under the Aditya Birla Group umbrella, has officially unveiled its flagship Eternia Experience Studio. This sprawling 2,500+ sq ft immersive space is meticulously built for North India's design vanguard, discerning homeowners and visionary architects who completely refuse to compromise between sweeping views and total structural integrity.

This modern craving for expansive, light-filled glass brings us directly to the real engineering muscle behind the minimalism: Duranium™. Hindalco's patented, high-performance aluminium alloy boasts an impressive 40 per cent strength advantage over standard profiles, easily withstanding intense wind loads of up to 3 kPa, which is the equivalent of a brutal 250 km/h hurricane. To take the guesswork out of design planning, the studio features highly interactive, dedicated experience zones alongside the scientific WiWA® performance rating system, a certified testing framework yielding explicit scores for wind, water, noise, heat and air infiltration.

Moving across the showroom floor, the space acts as an expansive, tactile canvas featuring 10 distinct System Aluminium Window and Door ranges. Instead of flipping through flat paper catalogues, visitors can fully interact with full-size, operable displays to feel the smooth, precision mechanics of sliders, casements, lift-and-slide, slide-and-fold, dramatic corner systems and massive large-opening solutions firsthand. Stepping straight into the future of automated smart homes, these structural setups seamlessly integrate next-gen glazing tech like switch glass, laminated acoustic glass, and energy-efficient options, all beautifully complemented by integrated blind systems and built-in pest protection solutions.

Every single premium piece on display is crafted with custom architecture in mind, presenting a highly extensive palette of custom colours, sleek finishes and architectural hardware options for deep customisation. By masterfully pairing heavy-duty metallurgical innovation with high-end luxury aesthetics under one roof, Eternia by Hindalco has laid down a definitive template for the future of premium luxury spaces, backed by custom-built consultation zones that easily make it the ultimate collaborative sandbox for developers, interior designers, and architects alike.
