

Guardians of the Green Bathroom

Roca seamlessly blends high design with deep ecological responsibility, transforming modern bathrooms into sanctuaries of conservation

Bureau Report

Modern bathroom design shifts toward environmental responsibility, a movement led by Roca's commitment to putting people and the planet at the centre of every decision. Every design detail matters. This includes engineering Roca eco-designed products built to last a lifetime, minimising manufacturing emissions, using clean energy, and reducing water and resource consumption. True sustainability views the home on both personal and global scales, driving Roca to reuse and recycle more while ensuring vital water and sanitation access for communities in need.

Innovative Water-Saving Systems

Responsible resource use relies heavily on developing technologies that favour conservation, a core focus of Roca's environmental research. Advanced bathroom fixtures allow homeowners to save water automatically without sacrificing comfort. For instance, the unique W+W design merges a washbasin and a toilet into a single unit, reusing water from the basin to flush the toilet. Additionally, developments like the Hall Waterless urinal operate entirely without water, while popular dual flush cisterns drastically reduce resource consumption during everyday use.

Smart Energy Control

Roca faucets and showers serve as critical areas for reducing utility waste through smart, effortless mechanics. The **Cold Start System** restricts right-side lever movement, meaning the default front position only dispenses cold water. This stops boilers from activating unnecessarily, a water and energy-saving feature also available via circular progressive cartridges. Furthermore, integrated aerators in faucets mix water with air to reduce flow while maintaining premium comfort. For showering, thermostatic showers achieve maximum efficiency using Quick Reaction technology to hit temperatures instantly, alongside a Security 38° safety system preventing energy waste.

Top-Tier Recognition

Continuous innovations reinforce Roca's strong commitment to embedding ethical, social, and environmental responsibility across all operations. Acknowledging these global standards, the Roca Group has been awarded the **EcoVadis Platinum Medal** for the second consecutive year. This represents the highest recognition granted by the global business sustainability rating platform. It places them within the top 1 per cent of over 1,75,000 evaluated companies worldwide, highlighting Roca's role as a global leader driving positive impact for people and the planet.
