

At the Maharaja Agrasen Institute of Technology (MAIT), nearly 95 per cent of the students who registered for placements this year have already received job offers. Amit Gautam, additional director (placements and alumni relations) at MAIT, says that 141 companies, including Infosys, Accenture, ZS Associates and DE Shaw, visited the campus this year, making over 1,300 job offers to 750 students.

What's equally impressive is the rise in average placement packages, which have increased from Rs 6.2 lakh per year in 2022 to Rs 8 lakh in 2024. This upward trend coincides with the institute's growing emphasis on research and innovation, which has contributed to its improved rankings. In 2022, the college had secured only Rs 1 lakh in consultancy projects and Rs 10 lakh in government research funding. By 2024, those numbers had shot up to Rs 80 lakh and Rs 70 lakh, respectively. This focus has also paid off in terms of intellectual property: in 2022, MAIT filed for eight patents, the number was 302 by 2024.

This culture of excellence stems from the vision of Dr Nand Kishore Garg, founder & chief advisor, Maharaja Agrasen Technical Education Society (MATES), who still remembers many of the students by name. He instantly recalls Aashi, a student from the very first batch in 2008, who received a Rs 1 lakh per month offer from Microsoft, and Akash Garg from the 2022 batch, who secured 5th rank in the UPSC exams. "My students are my most precious products," he says proudly.

GURUSPEAK

"Our ethos is to never let financial hardship get in the way of a good education"

DR NAND KISHORE GARG
Founder & Chief Advisor, Maharaja Agrasen Technical Education Society (MATES)

STUDENTSPEAK

"MAIT balances academic rigour with support for your passions outside the classroom. The student societies back our side hustles. I spent three years as a researcher/editor for a popular YouTube channel, and the college encouraged it all the way"

SOHAM SAHA
BTech, Final year

However, the founder also acknowledges that the institute has its limitations. As MAIT is affiliated with Guru Gobind Singh Indraprastha University, it must strictly follow university guidelines. "We cannot change the core curriculum," he admits, "but the moment the AICTE introduces any new course, MAIT is always among the first to adopt it."

SURGING AHEAD

Today, the college offers new-age programmes in VLSI (the process of creating integrated circuits or ICs), 6G technologies, semiconductors, logistics and supply chain management. Its student-made drones are currently being used by the Delhi Police, made possible by the institute's commitment to liberal funding for student projects and competitions. "Our ethos is to never let financial hardship get in the way of education," the founder adds. "Even though 200 students haven't paid their fees for the last semester, we haven't stopped their education. That's not who we are." The college also distributes free laptops to support students: those scoring above 90 per cent receive laptops, with the threshold lowered to 85 per cent for students from government schools. Last year alone, 350 students benefited from this initiative.

MAIT has invested heavily in infrastructure as well. Over the past year, it spent Rs 30 crore to build a 1 lakh square feet block, which houses modern classrooms, a sports complex, a cafeteria and upgraded labs equipped with cutting-edge technology for VLSI, communication systems and more. ■
