BUILDING SOME CODE COMPETENCY

With its fast-track curriculum and frontier tech focus, the Department of Computer Science at Christ is where innovation meets education and transforms into real-world outcomes

By **AJAY SUKUMARAN**

No. 1 DEPARTMENT OF COMPUTER SCIENCE, CHRIST (DEEMED TO BE UNIVERSITY)
Bengaluru

5 REASONS WHY IT IS THE BEST

1. Christ has partnered with technology firms to design courses in cutting-edge fields like Robotic Process Automation. This ensures both faculty training and real-time industry monitoring of student progress.

2. The Department of Computer Science encourages early exposure to research through its Undergraduate Research Immersion Programme in gamification, immersive technologies etc. It is backed by an annual industry-academia conclave.

3. Through active international partnerships, BCA students can take part in semester-long research exchanges in countries like Germany and France. This builds their cross-cultural competence and exposes them to global best practices.

4. A mandatory fast-track structure enables students to complete advanced coursework early, aligning with NEP 2020's four-year Honours model and preparing them for direct PhD eligibility.

5. With a focus on incubation, the department supports student-driven innovation while training them in high-demand domains like cybersecurity, Gen AI and computer vision—gearing them for both jobs and entrepreneurship.

GURUSPEAK

"A key unique selling aspect of our BCA programme is the emphasis on real-time, deep-learning projects that give students hands-on experience. In recent years, we've also shifted our focus toward more learner-centric teaching methodologies"

DR FR JOSE C.C.
Vice Chancellor, Christ (Deemed to be University)
