HDHI excels in advanced endovascular procedures, such as Transcatheter Aortic Valve Implantation (TAVI) and Thoracic Endovascular Aortic Repair (TEVAR). TAVI, a minimally invasive procedure, replaces severely narrowed aortic valves, while TEVAR addresses life-threatening conditions like thoracic aortic aneurysms and dissections.

Hero DMC Heart Institute

A COMMITMENT TO COMPASSIONATE CARE

At its core, DMC&H is driven by a patient-first philosophy, blending compassion with clinical excellence. Whether it's a Liver transplant, Renal transplant, Bone Marrow transplant, Corneal transplant, or a Robotic-assisted joint replacement, DMC&H continues to redefine healthcare standards in India.

ORTHOPAEDIC INNOVATION WITH ROBOTIC PRECISION

For over 25 years, DMC&H's Orthopaedics Department has been a pioneer in joint replacement surgery in North India. Performing over 3,500 major orthopaedic surgeries annually, including total knee, hip, and shoulder replacements, as well as complex revision arthroplasties, the department is a regional powerhouse. The introduction of the Velys Robotic-Assisted Joint Replacement System has revolutionized surgical precision, achieving near-perfect accuracy, minimizing soft tissue damage, and accelerating patient recovery. With nearly 200 robotic-assisted knee replacements already completed, DMC&H continues to set benchmarks in orthopaedic care.

SPECIALIZED EYE CARE FOR RETINAL DISEASES

DMC&H's Vitreo-Retina Services have positioned the hospital as a regional leader in managing retinal diseases. Equipped with advanced tools like Optical Coherence Tomography (OCT), high-resolution retinal cameras, fundus angiography, and high performance vitrectomy machines, the department offers world-class treatment for complex retinal conditions.

DMC&H also offers cutting edge **Corneal Transplant Services**, providing specialized care for patients with corneal disorders and restoring their vision with precision and compassion.

With a legacy spanning over 40 years, DMC&H's Department of Neurosurgery is one of the oldest and most esteemed in the region. The department provides comprehensive care for a wide range of neurosurgical conditions, supported by state of the art technology, including a cutting edge Cath lab and robotic visualization systems.

NEUROSURGERY: A LEGACY OF EXCELLENCE

The department performs a vide range of procedures such as aneurysm and arteriovenous malformation (AVM) treatments both open and endovascular are performed with exceptional precision. The department's active spine program, equipped with O-arm imaging, neuronavigation, and intraoperative nerve monitoring, ensures high standards of safety and accuracy in complex spine surgeries. Additionally, dedicated programs for epilepsy surgery and skull base tumor surgery, supported by advanced endoscopic technology, highlight DMC&H's commitment to innovation.

FUTURISTIC GASTROENTEROLOGY SERVICES

DMC&H is among the few institutions in India to adopt the high-tech endoscopic ultrasound (EUS) system, a game-changer in diagnostic and therapeutic gastroenterology. This technology enhances precision in cancer diagnosis and staging while enabling minimally invasive interventions.

ADVANCED NEONATOLOGY FOR THE MOST VULNERABLE

The Neonatology Department at DMC&H is a leader in caring for critically ill newborns, equipped with cutting edge technologies like nitric oxide ventilation for conditions such as Persistent Pulmonary Hypertension of the Newborn (PPHN) and congenital diaphragmatic hernia. The department's Portable Otoacoustic Emissions (OAE) system facilitates early detection of hearing loss in high-risk infants, while Giraffe incubators and radiant warmers provide critical support for preterm and critically ill neonates. The Servo-Controlled Therapeutic Hypothermia System addresses Hypoxic Ischemic Encephalopathy (HIE), a serious birth complication, ensuring the best possible outcomes for newborns.
