A FUTURE-READY HEALTHCARE CAREER BEGINS AT RV UNIVERSITY

Dr. Arindam Mitra
Professor and Dean, School of Allied and Healthcare Professions, RV University, Bengaluru, Karnataka

RV University in Bengaluru is a leading multidisciplinary institution offering innovative, research-driven education across diverse fields. Committed to academic excellence, the University fosters critical thinking, creativity, and real-world readiness in a vibrant, inclusive learning environment.

Starting in 2025, the School of Allied & Healthcare Professions at RV University (RVU) is dedicated to preparing the next generation of healthcare professionals through a comprehensive array of industry-aligned undergraduate programmes. The school provides students with the vital clinical skills, hands-on training, and theoretical foundation needed to excel in today's rapidly changing medical environment.

Currently, RVU offers three specialised programmes: B.Sc. (Hons.) Medical Laboratory Technology (MLT), B.Sc. (Hons.) Anaesthesia & Operation Theater Technology (AOTT), and B.Sc. (Hons.) Cardiac Care Technology (CCT). These degrees open doors to diverse careers in diagnostic laboratories, hospitals, surgical units, and critical care settings. The MLT programme trains students to analyse samples and assist in diagnostics, while AOTT students develop the technical proficiency to support anaesthesia and surgical procedures. The CCT programme positions students at the forefront of cardiac care, equipping them to work alongside cardiologists in high-pressure clinical environments.

What distinguishes these programmes is their alignment with the National Education Policy (NEP) 2020, which promotes multidisciplinary learning, flexibility, and employability. Students benefit from access to state-of-the-art laboratories, internships with leading hospitals, and guidance from faculty possessing rich clinical experience. With the growing global demand for allied health professionals, RVU graduates are well-prepared for careers both in India and abroad, or advanced specialisation through higher education pathways.

SONA COLLEGE OF TECHNOLOGY HAS PRODUCED 100 STUDENT MILLIONAIRES

Principal Dr.S.R.R.Senthilkumar says Becoming a millionaire even while as a student can be an ambitious goal. While it may not seem easy, Sona College of Technology has made it possible to become millionaires for not a few but for over 100 students this year (2024-25).

Companies are willing to offer top-tier salaries only when students possess industry-relevant skills, certifications, and problem-solving capabilities. At Sona College of Technology, besides our deep engagement with industry partners, conduct of soft skill training, mock interviews and pre-placement training, the real blueprint of this rare success is:

1) Institution's innovative course offerings with high potential for attracting employers who offer high salaried jobs to competent fresh engineers.

2) At Sona, we focus on providing value-added training and courses like 3D Experience platform and Xcelerator Programme that helped create students from core specialisations to become millionaires.

3) Short-term certificate courses of National Programme on Technology Enhanced Learning (NPTEL) have been taken by majority of our students with enthusiasm. Sona Chapter of NPTEL consistently motivated our students and faculty to enroll for these courses so as to equip themselves with the latest knowledge and skills related to their core and allied area of specialisations. As a result, Sona College of Technology has secured AAA rating, getting positioned within the top 20 among 7000 colleges across India.

All these skill enhancement training programmes go a long way in making our students industry-ready. One of the major features of enabling our students to get jobs with above Rs 10 lakh salary in leading companies in India and abroad. M/S Jindal Steel Works (JSW) was a major recruiter this year selecting over 50 percent of the student millionaires. What is more special about this is that most of the students are from core specialisations.

A student with Mechanical Engineering background got Rs.17 lakhs annual salary at Dassalut Systems this year. Also, in the current year, 34 students have got jobs in Japan after getting training in N5, N3 levels from our in-house Japanese Language Training Centre. So far, a total of 97 students of Sona have been selected by top notch companies like Yamaha Music, Fuji Software, Hi-tech Solutions, Next Gen, Nippon etc and they are working in Japan at 33.6 LPA(JPY).
