HOW DOES NUTRIGENOMICS WORK?

GENE ANALYSIS

Genomic testing ascertains how genes regulate an individual's consumption, absorption and utilisation of various nutrients

DIET PLAN

Based on the results, a personalised nutrition plan is made to ensure one is eating the nutrients their body needs

EXERCISE PLAN

Specific exercises might be suggested for those who show risks for obesity or other health issues

PERSONALISED RISK ASSESSMENT

The test also notes if there is any risk for future health complications such as diabetes, obesity, bone, heart or liver issue

MEDICAL PLAN

Medication, health supplements or treatment might also be recommended if one's body is unable to process or is overprocessing some nutrients
