THE NEW CLI

The India Meteorological Department, in its 'Statement on the Climate of India during 2025', outlines a year shaped by steady warming, uneven rainfall and frequent extreme weather. Why we have to worry

RECORD HEAT SIGNALS

+0.68°C

Rise in India's average temperature per 100 years since 1901

- Though below 2024's record high of 25.53°C, 2025 still averaged 25.16°C—the eighth warmest year since 1901
- 2016–2025 stands as the warmest decade, 0.32°C above normal

+1.36°C

Average deviation in February 2025, making it the warmest on record

- Minimum temperatures in February 2025 averaged 15.2°C, i.e. 1.2°C above normal, signalling unusually warm nights
- January, September and October also ranked among the warmest
