INVEST MADHYA PRADESH
INFINITE POSSIBILITIES

DR. MOHAN YADAV
Chief Minister of M.P.

REFORM TO RESULTS

THE MADHYA PRADESH MASTERCLASS IN GLOBAL DIPLOMACY AND INDUSTRIAL EXECUTION AT DAVOS 2026

In the frost-dusted quiet of the Swiss Alps—where the global economic elite gather to forecast the future of capital—a new narrative of pragmatic optimism was authored this January. For Madhya Pradesh, the World Economic Forum (WEF) 2026 in Davos was not merely a diplomatic exercise; it was a high-octane demonstration of a state transitioning from an aspirational heartland to a global industrial fulcrum. Under the leadership of Chief Minister Dr. Mohan Yadav, the state's high-level delegation made a confident and assured debut, positioning Madhya Pradesh as a preferred destination for global investment, innovation, and sustainable growth.

The mission, themed around a "Spirit of Dialogue," saw the delegation engage with global leaders, policymakers, and technology giants to advance a long-term development vision that is both inclusive and technologically sovereign. This was not simply a statement of intent; it was a performance-driven return. As global CEOs convened, the data spoke loudest: Madhya Pradesh has already grounded approximately 30% of the proposals from its 2025 Global Investors Summit, translating into a staggering ₹8.5 lakh crore worth of on-ground industrial activity. This high conversion rate forms the cornerstone of the state's Reform to Results blueprint, establishing a level of investor confidence that few sub-national entities can rival.

THE AI IMPERATIVE: ARCHITECTING "SOVEREIGN" TECHNOLOGY

In the era of the Fourth Industrial Revolution, Madhya Pradesh has made it clear that it will not be a passive consumer of technology but a sovereign architect of it. The state's engagements with NVIDIA and Google (Asia Pacific) at Davos marked a watershed moment in its digital governance journey. During a pivotal meeting with Calista Redmond, Vice President of Global AI Initiatives at NVIDIA, discussions focused on talent development and the creation of state-specific AI models. Central to this vision is the concept of Sovereign AI—technology aligned with local needs to ensure AI-driven governance platforms empower farmers, streamline service delivery, and operate with absolute transparency.

This digital ambition was further reinforced through interactions with Sanjay Gupta, Google's Vice President for Asia Pacific. Aligned with the recently launched Madhya Pradesh AI Mission, the dialogue explored the expansion of cloud and data-center infrastructure powered by 24×7 renewable energy. By targeting the development of Global Capability Centers (GCCs), companies such as Tech Mahindra and HCL Technologies have expressed intent to leverage the state's growing IT ecosystem in cities like Indore, Rewa, and Ujjain. For the state's youth, this translates into high-end digital employment and an innovation ecosystem where ideas are not imported, but incubated locally.

THE GREEN TRANSITION: DE-RISKING THE GLOBAL FUTURE

As the world grapples with the climate crisis, Madhya Pradesh presented itself at Davos as the "Green Heart of India." In a high-level roundtable titled "De-risking the Green Leap: Sub-national Blueprints for Utility-scale Energy Transition," the state showcased its leadership in integrating renewable energy into the mainstream of its development strategy. Dr. Mohan Yadav emphasized that green energy lies at the core of the state's inclusive and sustainable growth model, inspired by Prime Minister Narendra Modi's national renewable energy vision.

Global leaders from ReNew Power, IOCL, and GAIL acknowledged Madhya Pradesh's investor-friendly policies, particularly its bankable power purchase agreements and robust transmission infrastructure. Discussions with ReNew Power CEO Sumant Sinha highlighted how policy clarity and administrative support have created a high-trust environment for utility-scale solar and energy
