- Dr Alok Sharma presenting the honorable Prime Minister Shri Narendra Modi ji with the copy of his book 'Stem cell therapy for neurological disorders'

- Dr Alok Sharma being honoured for excellence in Regenerative Medicine by honourable Health Minister Shri JP Nadda

India's global leadership in Regenerative Medicine for Neurological Disabilities

Dr. Alok Sharma – NeuroGen Brain and Spine Institute Navi Mumbai.

THE SHIFT IN INNOVATIVE MEDICAL TREATMENTS AND RESEARCH IN INDIA.

From a time, several decades ago, when affluent Indians travelled overseas in search of advanced medical treatment, to today—when more than 16,000 patients from 113 countries have sought care at NeuroGen Brain & Spine Institute, Navi Mumbai—there has been a transformation in innovation, confidence and delivery of advanced health care systems within the country.

From an era when Indian doctors depended on publications by overseas peers to update their knowledge to a time when doctors from across the world are referring to scientific papers published from India there has been a shift in the research temperament and confidence within the country.

This transformation is exemplified by NeuroGen's publication of the world's first scientific paper on cell therapy in autism and also the world's first paper on cell therapy in intellectual disability as well as 112 other scientific papers in this field. This shift stands as compelling evidence of changing times putting India firmly at the forefront of global medical innovation. This work is in alignment with Prime Minister Shri Narendra Modi's vision of Viksit Bharat, Atmanirbhar Bharat, Make in India, and Skill India.

INDIA'S ROLE IN PIONEERING CELLULAR THERAPY TO TRANSFORM LIVES OF THE DIVYANG.

Prime Minister Narendra Modi has consistently demonstrated a deep and personal commitment to the nation's Divyang community. By replacing the term 'Viklang' with 'Divyang', he ushered in a transformative shift in societal attitudes towards disability, impacting nearly 2.68 crore Indians. This vision was further strengthened through the landmark Rights of Persons with Disabilities Act, 2016, a milestone in India's journey towards dignity, equality, and empowerment for all.

His support for the field of Cell/ Stem cells is exemplified by his visit to the laboratory of Nobel Prize winner Professor Yamanaka in Kyoto, Japan in 1914, his initiation of the setting up of India's first dedicated stem cell centre in Surat when he was chief minister and an impassioned speech made by him on Stem Cells in Parliament in 2015.

Dr. Alok Sharma has converted both these visions into reality by innovating a new form of treatment for the Divyang in the form of cell/stem cell therapy.

THE GLOBAL SIGNIFICANCE OF THE WORK BEING DONE IN INDIA IN THE FIELD OF REGENERATIVE MEDICINE FOR NEUROLOGICAL DISABILITIES SUCH AS AUTISM.

There is an increasing incidence of neurological disabilities such as Autism which globally has increased from affecting 1 out of 1000 children in 1995 to 1 in 31 children at present. The President of the United States, Mr. Donald Trump, has highlighted this fact on several occasions over the past several months—from the White House, Congress, as well as in several media interviews. Earlier there was no definitive
