medical treatment for autism, however Dr. Alok Sharma through his pioneering combination of Autologous Cell Therapy combined with Neuro Rehabilitation and Integrative Therapies has shown an over 90% success rate in treating children with autism. His work is documented in the world's first published paper on cell therapy in Autism in the "Journal Stem Cell International" in 2013. A subsequent paper published by him in the prestigious "American Journal of Stem cells" in 2019 further documents this. Most recently the world's largest case study is to be published by Dr. Sharma in the "Journal Clinical Transplantation and Research". More than 8000 patients of Autism from over more than 100 countries have come to NeuroGen Brain and Spine Institute in India to get the benefits of Dr. Sharma's treatment. Children with autism who were earlier unable to communicate, perform routine activities, or attend mainstream schools are now, with the help of cell therapy able to communicate better, carry out daily activities, and integrate into regular schools.

Other conditions treated at the NeuroGen Brain and Spine Institute with cellular therapy for children include Cerebral palsy, Intellectual Disability, Down Syndrome, etc. In adults paralysed patients due to spinal cord injury, brain stroke, etc. have been restored of function of their limbs and have been lifted from wheelchairs to walking on their feet. This has been of particular significance to our nation's brave soldiers injured by bullets or accidental falls while serving the country. Lives of patients with terminal conditions such as Duchenne Muscular Dystrophy, Motor Neuron disease have been saved.

WORK DONE IN ANTI-AGING AND COVID-19

Dr Sharma has also made notable contributions to the field of Anti-Aging. Through a holistic approach encompassing non-invasive and simple treatments, he has demonstrated the scientific feasibility of slowing down the aging process. He has set up one of the country's first dedicated Anti-Aging hospital in Navi Mumbai.

During the COVID-19 pandemic, he remained dedicated to public health, having treated more than 900 COVID-19 patients. Furthermore, he took the initiative to assess the application of Stem cells and Ozone therapy in the context of COVID-19. His groundbreaking research and clinical endeavours have culminated in the publication of four scientific papers and two books on COVID-19, all authored by him.

AWARDS AND ACCOMPLISHMENTS

- Publication of the World's First scientific paper on the role of cellular therapy in Autism
- Publication of World's First paper on the role of cell therapy for Intellectual disability.
- "Nelson Mandela Leadership award", Oxford, UK (2023)
- "Sino Phil Asia International Peace Award", Manila, Philippines (2023)
- "Newton Universal Legendary Award" from the Socio-Economic Development Foundation Boston, USA (2022)
- "SuperHero Autism Award" by Sunderji's Global Academia (2021)
- "Bharat Gaurav Award" for Distinguished Services to the Nation at the House of Commons of the British Parliament in London, UK (2019)
- "European Award for best practices" from the European Society for Quality Research at Brussels, Belgium (2018)
- "Best Institute of stem cells and research center in India", India (2018)
- "Rose of Paracelsus Award" by European Medical Association Oxford UK, (2016)
- "Sushrut Award" for exemplary work in the field of Surgery (2010)
- Published 173 papers and 24 books
- Director of NeuroGen Brain & Spine Institute, Navi Mumbai
- Retired Professor and Head of Neurosurgery at LTMG Hospital & Medical College, Mumbai
- President of the International Association of Neurorestoratology
- President of the Society for Regenerative Sciences (India)

FUTURE DEVELOPMENTS

NeuroGen has received permission from the Government of Bahamas to offer this treatment in their country. The new Bahamas NeuroGen Hospital will become operational from March 2026.

Using AI, pathbreaking research is being conducted at NeuroGen, combining the blood, CSF and gut microbiome data of neurotransmitters and hormone levels to better understand the causes and progression of autism. Work on advanced brain imaging to understand and manage what is happening in the brains of children with autism is ongoing.

Advanced research into brainwave modulation to manage symptoms of autism is also underway. In parallel, the development of an AI-based child robotic companion, as well as a digital rehabilitation platform, is in progress.

The work of Dr. Sharma exemplifies the new faith and belief that Indian doctors have in their own research and medical treatments and who have stopped blindly following the colonial era thought processes of practicing only what doctors from the western countries advocated. These new Indian pioneers are not just making a difference in the lives of patients within the country but are also showing the world what is possible and what can be done in the future.
