

FROM SEED TO MARKET, A TRANSFORMED FARMING LANDSCAPE

In Uttar Pradesh, agriculture is no longer merely a means of subsistence; it is emerging as a pathway to higher incomes and new avenues of enterprise. Under the leadership of Chief Minister Yogi Adityanath, the state government over the past eight and a half years has connected agriculture to an integrated value chain from seed to market (Beej se Bazar Tak). As a result, the farmer's role is no longer confined to production alone, but extends to technology adoption, market access and price participation within the mainstream economy.

STRENGTHENING THE FOUNDATION OF FARMING

The first pillar of the Yogi government's strategy has been to reinforce the very foundations of agriculture. Without quality seeds, scientific crop management and accurate soil intelligence, income enhancement was not possible. Guided by this approach, farmers were provided free Soil Health Cards through mobile applications, enabling easy access to information on soil nutrients, fertiliser requirements and crop suitability. This precision reduced input costs while improving productivity.

Through digital platforms, farmers now receive daily

UTTAR PRADESH'S SHARE IN NATIONAL AGRICULTURAL OUTPUT

Oilseeds production	Pulses production	Rice production	Ranked first in ethanol production	Foodgrain production	Mango production	Sugarcane production	Milk production
6.9%	14%	14.7%		20.5%	25%	54.5%	16.21%
