NOIDA INTERNATIONAL AIRPORT THE RUNWAY OF UTTAR PRADESH'S PROGRESS

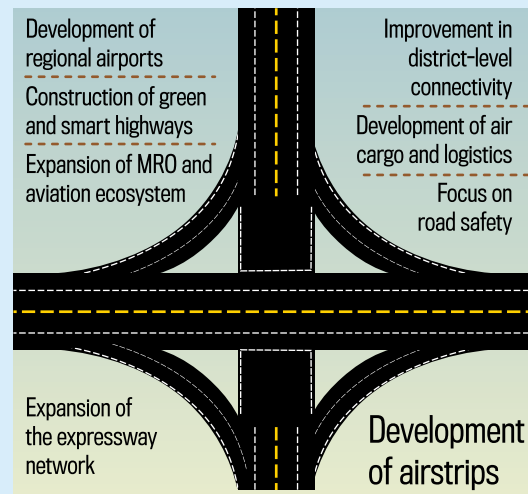

- Noida International Airport is Asia's largest and the world's fourth-largest airport.
- The airport will be spread across 5,845 hectares and be equipped with state-of-the-art technology.
- In the first phase, construction of the runway, taxiway, terminal building and parking area has been completed.
- Noida International Airaport will be India's first airport with six runways and four terminals.
- The airport will be able to park 178 aircraft simultaneously and will facilitate commercial flight operations.
- The airport will include an aerocity, logistics hub, business zone and hospitality zone.
- Advanced smart technologies and digital processing systems will be installed at the airport.
- Passengers will be able to travel through paperless digital entry, resulting in time savings.
- A carbon-neutral and sustainable model is being adopted, with the use of solar energy.
- The airport will have an annual passenger handling capacity of over 70 million, which has the potential can be doubled in the future.
- The airport is being connected to Delhi-NCR through advanced multi-modal connectivity.
- Direct connectivity from the airport will be available via metro, expressways and rapid rail.
- The development of industrial corridors around the airport will lead to large-scale industrial activity.
- As a cargo-specialised airport, it will emerge as North India's largest export hub.

economic activity. Rural connectivity has seen a similarly decisive shift. Under the Pradhan Mantri Gram Sadak Yojana, road expansion gathered pace after 2017, resulting in thousands of kilometres of new rural roads. Villages are now better connected to markets, schools and healthcare facilities, with visible gains in education outcomes, healthcare access and farm incomes. Farmers are able to move produce swiftly to mandis and processing units. Smart City projects have further linked connectivity with technology. CCTV networks, safe city initiatives and improved public transport systems have made urban life more structured and secure. The upcoming ropeway service in Varanasi reflects how connectivity has evolved beyond conventional roads and rails into a space of innovation.

CONNECTIVITY DRIVING CONFIDENCE AND INVESTMENT

Railways and waterways form integral pillars of this connectivity model. Uttar Pradesh hosts the largest railway network in the country, serving as a backbone for both freight and passenger movement. The developing Varanasi-Haldia waterway connects northern India with eastern ports, reducing logistics costs and strengthening export potential. The impact of connectivity is clearly reflected in investment trends. Prior to 2017, Uttar Pradesh was rarely among investors' preferred destinations. Today, projects such as the Jewar Airport, Defence Corridor, Film City, Medical Device Park and data centres are positioning the state as a major investment hub. The Yamuna Expressway Industrial Development Authority (YEIDA) region alone has attracted investments worth thousands of crores in recent years, generating large-scale employment. Improved road and air connectivity has strengthened investor confidence, while tourism has emerged as one of the biggest beneficiaries. Enhanced infrastructure and urban amenities have repositioned cities such as Ayodhya, Kashi, Prayagraj and Mathura. Since 2017, tourist arrivals have multiplied several times. Alongside religious tourism, eco-tourism and heritage tourism have gained strong momentum.

BRIDGING DISTANCES, BUILDING MOMENTUM

MAJOR EXPRESSWAYS

Purvanchal Expressway **340.8 km**	Noida-Greater Noida Expressway **24.53 km**
Bundelkhand Expressway **296.1 km**	Gorakhpur Link Expressway **91.35 km**
