Robust Governance, Capital Strength and Global-Grade Ratings

The strength of IREDA's balance sheet reflects a carefully calibrated approach to risk and capital management. Its net worth has expanded to ₹12,920 crore, supported by a CRAR of 20.10%, well above the RBI-mandated 15% for NBFC-IFCs. Importantly, IREDA has preserved strong asset quality even as it has scaled, with 84% of the loan book secured and the majority of supported projects already operational, resulting in predictable, stable cash flows and a resilient portfolio.

IREDA has cumulatively sanctioned ₹2.71 lakh crore and disbursed ₹1.71 lakh crore, with write-offs of only ~₹135 crore, a striking indicator of its disciplined credit culture and governance strength. This performance is supported by fully digital, paperless processes that enhance transparency, improve turnaround times, and position IREDA as a preferred destination for both domestic and global climate investors.

At the core of this governance architecture sits a best-in-class end-to-end loan-management framework, covering online applications, detailed appraisal, sanction, pre-disbursement due diligence and continuous monitoring. A proprietary credit-rating model, early-warning systems and cross-functional committees for security creation, SMA management and NPA recovery reinforce this framework, ensuring scalability without compromising risk discipline.

Setting new benchmarks in transparency, IREDA became the fastest among all NSE/BSE-listed Banks and NBFCs to publish its FY25 Annual Audited Results within 15 days, reflecting a culture anchored in operational rigour and accountability.

This combination of strong governance, disciplined growth and digital excellence has translated into top-tier credit ratings, AAA/Stable domestically and an upgraded BBB rating from S&P Global, a level aligned with India's sovereign rating. Such global-grade credibility not only lowers the cost of capital but also cements IREDA's position as one of India's most trusted and future-ready green-financing institutions.

Fueling Growth Through Capital Market Innovation

With the renewable-energy sector requiring an estimated ₹31.6 lakh crore of investment by 2030, IREDA has turned capital-market innovation into a powerful engine for sectoral growth. In November 2023, it completed a landmark IPO of about ₹2,150 crore (including fresh issue and an Offer for Sale by the Government of India), followed by a successful ₹2,005.9 crore Qualified Institutional Placement (QIP) in June 2025, demonstrating its ability to command deep investor confidence and mobilise scale capital swiftly.

Complementing its equity strategy, IREDA has diversified and internationalized its borrowing base through JPY 26 billion in external commercial borrowing from SBI Tokyo, alongside a suite of green bonds, masala bonds and domestic bond issuances. This broadened funding mix enhances resilience

and ensures that India's clean-energy expansion is supported by stable, long-tenor financing.

A defining leap forward is the establishment of IREDA's specialised subsidiary at IFSC GIFT City, now fully registered with IFSCA. Through this platform, IREDA can offer foreign-currency debt at materially lower cost, providing developers with access to globally competitive financing.
With the GIFT City platform, IREDA is not only accessing global pools of capital; it is reshaping how India finances its clean-energy future, bringing international-grade cost efficiency to the heart of the transition.

Expanding Across Geographies, Technologies and the Value Chain

IREDA's portfolio today mirrors the breadth of India's clean energy landscape. Its ₹84,477 crore loan book is widely diversified across states, with significant exposures in Andhra Pradesh (about ₹9,426 crore), Karnataka (₹11,811 crore), Rajasthan (₹13,437 crore), Telangana (₹8,207 crore) and Tamil Nadu (₹7,159 crore), while the remaining portfolio is distributed across other states and multi state projects. This geographic spread reduces concentration risk and ensures that the benefits of clean-energy investment are shared across regions.
Across technologies, IREDA is increasingly financing the next frontier of India's green transition. It is providing first-to-market financing for ethanol, green hydrogen and its derivatives, battery storage and pumped hydropower, smart meters, solar-equipment manufacturing, and decentralised solar solutions (PM-KUSUM, rooftop solar), alongside its established support for solar, wind, hydro, biomass and cogeneration.

Operationally, IREDA has modernised its systems through extensive digitization, from online applications and customer portals to ERP-based monitoring and analytics, resulting in a 3.2× increase in gross loan portfolio per employee over the last five years. Newly established divisions such as the Stressed Asset Management Division and the Entity Appraisal Division further strengthen underwriting rigour, portfolio supervision and asset-recovery capability.

To support this expanding mandate, IREDA has strengthened its talent base by recruiting from premier institutions (IITs, IIMs, XIMB, XLRI etc) and select lateral additions. The workforce grew by ~30% in H1 FY26, reaching 213 professionals, with nearly 90% qualified in engineering, finance, law, HR, risk or IT, ensuring the organisation has the technical depth required to manage a rapidly growing and increasingly sophisticated portfolio.

Partnering MNRE in the Vision of Net-Zero and Viksit Bharat

As the central implementing agency or nodal institution for several Government of India schemes, from the PLI for high-efficiency solar modules and the CPSU scheme for 12,000 MW of solar to National Bioenergy and waste-to-energy programmes, IREDA operates at the crucial intersection of policy design and project finance. This unique position allows it to translate MNRE's strategic priorities into bankable projects on the ground, de-risking new technologies and accelerating private participation. Under the stewardship of its Chairman and Managing Director Shri Pradip Kumar Das, IREDA has emerged as a cycle-tested institution that can support the Prime Minister's Net-Zero 2070 vision with credible, scalable financing solutions.

Looking ahead, IREDA's growth runway is vast: estimates suggest ₹31.6 lakh crore of renewable-energy financing potential by FY30, encompassing solar, wind, hydro, green hydrogen, bioenergy, storage, transmission and manufacturing. With strong capital adequacy, world-class governance and a pipeline aligned with MNRE's priorities, IREDA is well-placed to multiply its loan book while maintaining prudence, ensuring that every megawatt of clean capacity envisaged under national targets finds a reliable, affordable financing partner.

In the journey toward Net-Zero and Viksit Bharat, IREDA is not just supporting the transition, it is shaping the financial architecture that will power India's green future.

MNRE is transforming India's energy system, from fossil-fuel dependence to a resilient, domestically anchored, innovation-driven clean-energy economy. As India strides towards Viksit Bharat, Net-Zero 2070 and true Aatmanirbhar Bharat in energy, its efforts promise a future where every home, farm, factory and vehicle is powered by affordable, indigenous and sustainable energy, lighting the path for the world to follow.
