DATTA POWER INFRA

POWERING INDIA'S CLEAN ENERGY REVOLUTION WITH SCALE AND SPEED

In his Independence Day speech from the ramparts of the Red Fort on August 15 this year, Prime Minister Narendra Modi a major national milestone – achievement of 50 per cent clean energy in 2025, five years ahead of its target year 2030, and highlighted the extraordinary thirty-fold increase in solar energy in the country in the last 11 years. Today, India stands as the world's third largest producer of solar power in the world and ranks fourth globally in renewable energy installed capacity – a growth driven by the Prime Minister's vision of energy independence as a foundation of the nation's future.

Varchasvi Gagal
Managing Director, DATTA INFRA

Just over six years ago, the opportunity to contribute to India's mission and vision of becoming a global leader in renewable energy inspired a young lawyer Varchasvi Gagal to quit his profession and venture into renewable energy business. "Our company Datta Power Infra Pvt Ltd began its journey in the year 2020 with a 300 MW pre-development EPC work for Tata Power. As of date, we have done 6,700 MW of pre-development EPC work for some of the largest renewable energy companies including NTPC Ltd and SJVN Ltd while another 7,300 MW is under execution," says Varchasvi Gagal, Managing Director of the company.

Datta Power Infra Pvt Limited has emerged as a market leader in the pre-development EPC business in the country. Having established expertise in the pre-development EPC, the company became an Independent Power Producer (IPP) in the year 2024 and has been awarded 970 MW of projects as of now. The company plans to add another 500 MW of IPP projects in the next one year.

In 2023, Datta Power Infra consolidated its expertise in the renewable energy business by setting up EPC division as a forward integration to its pre-development EPC business. The company's EPC division has already bagged orders worth Rs. 4,000 crore.

In 2023, Gagal identified a critical hesitation among large investors who were willing to bet their money in the renewable energy sector but were holding back their investments due to uncertainty over land aggregation, connectivity of power and setting up transmission line for evacuation of power. He quickly moved to address to this issue. Datta Power Infra built expertise to set up the entire solar park infrastructure including power evacuation corridor that gave the confidence to global funds and Indian corporates to join hands with Datta Power as co-developers. As of today, Datta Power has done 900 MW in co-development with investors.

Another reason for the company rapid business growth is Gagal's hands-on approach to managing the business with sharp focus on excellence in operations and building a management team of professionals with expertise in their respective domains.

We are fortunate to have Mr Kuldeep Singh as our company's chairman. His wisdom and expertise in managing certain crucial parts of the renewable energy business has played a significant role in the rapid growth of the company," adds Gagal.

Says Mr Kuldeep Singh, Chairman of the company: "Datta Infra was not built to follow. We were built to lead. In a sector where many speak of possibilities, we focus on execution. Project after project, state after state, we have proven that discipline, speed, and clarity of purpose can rewrite the benchmarks
