

of India's infrastructure and renewable energy landscape. Today, as India accelerates towards Viksit Bharat, Datta Infra stands at the frontlines — driving clean energy expansion, building future-ready assets, and shaping a new era of industrial growth. We do not wait for opportunities; we create them. We do not look for direction; we set it. Our ambition is to be one of India's most impactful infrastructure powerhouses, delivering scale with

Chairman, DATTA INFRA

precision and growth with integrity. Every asset we build strengthens India's energy independence and every milestone we cross brings the nation closer to the developed future envisioned by our Hon'ble Prime Minister Shri Narendra Modi. The next decade belongs to bold companies with the courage to move fast and think bigger. Datta Infra is one of them."

Adds Gagal, "In today's world, we must build a company and work culture that is conscious of sustainability and building relationships with all stakeholders, specially at the grass root level with the communities where we set up round-the-clock (solar, wind, battery) projects. Profitability with responsibility is very important."

With expertise across solar, wind and hybrid, the company today has a well-rounded business portfolio and has business operations across the country in Rajasthan, Andhra Pradesh, Gujarat, Maharashtra and Madhya Pradesh. This demonstrates the company capability to successfully execute projects in different geographical areas of the country which is normally a big challenge for companies in the renewable energy sector.

Gagal is confident that India is well and truly on the path to become a developed nation and to achieve that vision there has to be manifold improvement in infrastructure. "I firmly believe that India stands at the threshold of a historic transformation under the vision of Viksit Bharat. My passion is to contribute meaningfully to this journey—by accelerating clean energy adoption, strengthening infrastructure, and building institutions that will serve generations to come. A developed India is not just an aspiration; it is a responsibility we all share. I am committed to doing my part with integrity, innovation, and an unwavering belief in our nation's potential."

When asked what contributed to the rapid growth of the company's business in the last six years, Gagal said he believes in building strong partnership with various stakeholders – business partners and associates, government, local communities, industry experts and professionals. For example, one of the biggest challenges that a large power developer faces in the solar and wind energy sector is the pre-development EPC. The challenges are not only confined to consolidating the land required but also other challenges on technical front including setting up of transmission lines for evacuation of power.

"We overcome the challenges by following a process-oriented approach with feet on the ground. We do detailed due diligence, technical and feasibility studies including environment impact and assessment. We engage with local community and support them right from the beginning which builds trust and confidence in them," adds Gagal.

Datta Power Infra's Environmental, Social and Governance (ESG) strategy comes in handy here. It is not just a box ticking exercise. This approach emphasizes a sustainable business practice that gives importance to environmental stewardship and community benefits, that is evident in numerous community support programs initiated by the company with a focus on education, health and sustainable development in the geographical areas in which the company is present.

Gagal's leadership and business acumen has been well recognized -- he was conferred with with "ET 40 under 40" award in September 2025 by India's largest business daily newspaper The Economic Times. In 2024, Business World magazine conferred Gagal with Best Leadership Award in the MSME category in 2024. He was also a Speaker at India Today's Energy Conclave 2025 held in New Delhi.
