

> Collaborations with leading Start-up enablers such as **TiE, CII-Young Indians, ASSOCHAM, FKCCI, AWAKE** and others further strengthening the ecosystem, positioning GAT as a launchpad for future entrepreneurs and innovators.

Collaborations with leading Start-up enablers such as TiE, CII–Young Indians, ASSOCHAM, FKCCI, AWAKE, and others further strengthening the ecosystem, positioning GAT as a launchpad for future entrepreneurs and innovators.

Industry MoUs & Collaborations

Global Academy of Technology has established a strong collaborative ecosystem through strategic Memorandums of Understanding (MoUs) with premier institutions, research organizations, and industry partners. These collaborations enhance academic delivery, promote applied research, and provide students with industry-aligned exposure and global competencies.

A landmark collaboration with CSIR–National Aerospace Laboratories (NAL) enables joint research initiatives, student internships, faculty exchange, and mutual utilization of advanced research facilities. This partnership provides valuable exposure to real-world aerospace research environments and strengthens experiential learning in advanced engineering domains.

GAT has also signed MoUs with leading industrial organizations such as Toyota and ACE Micromatic, supporting industry interaction, technical training, internships, expert lectures, and exposure to modern manufacturing practices. These collaborations help students gain insights into industrial workflows, quality systems, and emerging technologies.

Academic and research-oriented MoUs with institutions such as IIIT Allahabad promote research mentoring, knowledge exchange, and academic collaboration. Partnerships with professional bodies support leadership development, entrepreneurship, and industry networking.

Through these MoUs, GAT ensures that academic learning is closely integrated with industry expectations, research relevance, and professional growth.

Research, Innovation & Sponsored Projects

Global Academy of Technology has cultivated a strong research and innovation ecosystem that encourages inquiry, creativity, and solution-driven learning. Research at GAT is driven by real-world challenges and aligned with national priorities such as sustainability, infrastructure development, digital transformation, and advanced manufacturing.

The institution has successfully secured funding from prestigious agencies, including ISRO, AICTE, VTU, VGST and KSCST, supporting interdisciplinary research projects in areas such as geospatial technologies, water resource management, sustainable construction materials, renewable energy systems, healthcare devices, and smart infrastructure. These projects enable students and faculty to collaborate on impactful research that contributes to societal and industrial advancement.

GAT is recognized as a VTU-affiliated Research Centre, fostering doctoral and postgraduate research across engineering, management, and science disciplines. Faculty members actively publish in reputed international journals, file patents, and participate in global conferences, strengthening the institution's academic visibility.

Research activities are closely integrated with industry consultancy, allowing faculty and students to engage in testing, analysis, design validation, and performance evaluation for government agencies and private organizations. This applied research approach ensures that innovation at GAT extends beyond laboratories, creating tangible outcomes that benefit industry and society alike.

Campus Life: Student Clubs & Experiential Learning

Student life at Global Academy of Technology thrives through an active club culture that balances technical innovation with creativity, leadership, and personal growth. The institute encourages participation in both Technical Clubs and Non-Technical Clubs, ensuring holistic development beyond academics.
