FROM SEED TO MARKET, ERDE AGRO

A FARMER'S PARTNER THROUGH ITS FPO MODEL!

Farmers in India often do not receive fair prices for their produce. To solve this persistent problem, Erde Agro Ecosystem has been working with a new approach. Its primary goal is to protect farmers from middlemen, ensure they get the right value for their crops, and transform their local produce into recognizable "brands." Erde Agro's entire model is based on FPOs (Farmer Producer Organizations), since collective strength makes farmers more empowered. The company works in close partnership with these FPOs, improving their earnings. This directly benefits farmers at every stage—from sowing to selling—and increases their overall income.

Comprehensive Support from Seed to Market

Erde Agro not only provides farmers with seeds and fertilizers but also with essential knowledge and training. It teaches them how to grow crops in line with market demand and helps create a marketing network for purchasing their produce. Through FPOs, farmers gain access to quality seeds, training on scientific farming methods, and assistance with bank loans and government schemes. They are also trained in food processing and producing organic fertilizers, which reduces costs and boosts profits.

Making FPOs Self-Reliant and Multipurpose Service Centers

Erde Agro's Director, Mr. Sukrut Mehta, believes that if the FPO becomes strong, the farmers will automatically become strong too. His goal is to develop FPOs into "Multipurpose Service Centers," where farmers can access everything—from seeds and fertilizers to loans, training, and marketing—under one roof. When these FPOs handle processing and packaging activities, they also generate local employment for rural youth. Erde Agro supports them in maintaining accurate financial records, enabling easier access to bank loans. Additionally, farmers receive digital services such as soil testing and weather updates.

Connecting Farmers with Government Schemes: A Dual Advantage

Erde Agro acts as a bridge between farmers and FPOs, linking them to government schemes, subsidies, and training programs that they often miss due to lack of awareness. It also assists in establishing food processing infrastructure. This reduces post-harvest losses, raises farmer incomes, ensures better prices, and strengthens the rural economy.

Major Initiative: Collaborating with Government and Corporates

Mr. Sanjeev Masalia, Director of the Erde Agro Ecosystem, shared that to provide farmers with better fertilizers, seeds, technologies, and credit access, Erde Agro has collaborated with several major organizations such as IFFCO, Reliance Fertilizer, ITC, Cargill, Griffith Foods, and the Central Govt. Employees Consumer Cooperative Society Ltd. popularly known as Kendriya Bhandar. The company has also received approval from the Ministry of Agriculture to work at a pan-India level with all registered FPOs. The Ministry recognizes that these organizations need quality inputs, crop insurance, and fair prices for their produce. Erde Agro aims to fulfill these pressing needs and help boost farmers' incomes nationwide.

Assam Partnership for Storage, Processing, and Market Access

In Assam's Karbi Anglong region, Erde Agro has signed an MoU with the Karbi Autonomous Council (KAAC) to promote agriculture. Together they will form a joint venture company named "Hill Agro Development Corporation Ltd (HADCL)," with 51% equity share from Erde Agro and remaining 49% share from KAAC. This initiative will establish new Food Parks and Logistics Hubs, helping farmers with storage, processing (such as chips and pickles), and market access. A dedicated "Support Cell" will help farmers benefit from government schemes and provide financial protection against unpredictable losses like droughts or excessive rainfall.

Farming with satellites, turning local brands into professional ones!

Erde Agro makes extensive use of modern technology in agriculture. In collaboration with "Irriwatch-Hydrosat (USA)," it uses satellite-based monitoring to track irrigation needs and crop growth, helping farmers save both water and money. The company also assists rural FPOs in branding their top-quality village products—such as pickles, honey, and spices—into professional market brands. With better packaging and visibility, these products can reach customers beyond local markets. Through technology, training, and branding support, Erde Agro is empowering farmers at every step—enhancing incomes and strengthening rural India.
