

GUJARAT LEADING THE NATURAL FARMING REVOLUTION

Gujarat has emerged as one of Indias strongest champions of natural farming, driving a steady transformation in how food is grown, soil is protected, and farmers earn their livelihoods. What began as an alternative practice has now become a structured statewide movement guided by policy intent, scientific support and farmer participation. With a clear vision and organised framework, the Government of Gujarat has positioned natural farming as a dependable pathway to sustainable agriculture and rural prosperity.

Across the state, farmers are moving away from chemical intensive cultivation and adopting natural inputs that restore soil health, reduce costs and improve long term productivity. The shift is delivering healthier food for consumers, better incomes for farmers and stronger resilience to climate uncertainty.

SHRI JITUBHAI VAGHANI
Honorable Minister for Agriculture of Gujarat State

This momentum aligns with the national push under Shri Narendrabhai Modi, Honorable Prime Minister of India, through the National Mission on Natural Farming. In Gujarat, the mission is being advanced under the guidance of Shri Acharya Devvrat, Honorable Governor of Gujarat, with strong leadership from Shri Bhupendrabhai Patel, Honorable Chief Minister, and Shri Harsh Sanghavi, Honorable Deputy Chief Minister. Reinforcing this direction, Shri Jitubhai Vaghani, Honorable Minister for Agriculture of Gujarat state, has emphasised that expanding natural farming is vital to improving farmer livelihoods and strengthening India's self reliance in agriculture.

A Vision Rooted in Soil and Profit

The guiding philosophy is simple replace synthetic chemicals with locally available natural resources. Farmers now rely on cow-based formulations, mulching and diverse cropping systems that work in harmony with nature.

With fertilizers and pesticides removed from the production cycle, cultivation costs have fallen sharply. Improved soil structure, water retention and microbial activity have helped stabilize yields. The result is a system that protects the environment while strengthening rural incomes.

Gujarat Prakrutik Krishi Vikas Board: A Strong Institutional Backbone

To turn vision into action, the state created the Gujarat Prakrutik Krishi Vikas Board as the central agency for planning and execution. The Board works with multiple departments and aligns its programmes with the National Mission on Natural Farming.

A structured cluster approach ensures statewide reach. A total of 4,890 clusters now operates across Gujarat, each covering 50 hectares and involving at least 125 farmers. Two resource persons (Krishi Sakhis/CRP) in every cluster provide field guidance and continuous support.

Training and Market Support

Capacity building remains the backbone of the programme. Nearly 20 lakh farmers are trained every year in soil health improvement, preparation of Jeevamrut and Beejamrut, natural pest control, mulching and mixed cropping. Learning is strengthened through model farm visits, field demonstrations and farmer scientist interactions.

Market access has been strengthened through the establishment of farmers markets at cluster, taluka, and district levels under the Prakrutik Bazaar initiative, enabling farmers to sell chemical-free produce directly to consumers. More than 7100 model farms and 800 Bio-Input Resource Centres supply essential inputs such as Bijamrut, Jeevamrut, Brahmastra, and Nimastra.

Financial assistance for maintaining Deshi cows, developing model farms, and setting up resource centres supports a smooth transition for new adopters.

Knowledge Institutions and a Chemical Free Milestone

A major milestone is the establishment of the Gujarat Natural Farming Science University, dedicated to research, education and extension. In a powerful signal of intent, Dang district has been declared a fully chemical free farming zone.

Setting the Direction for India's Farming Future

Gujarats natural farming journey reflects more than a change in cultivation methods. It marks a wider shift where soil health, farmer income, food safety and environmental protection are treated as a single goal. With sustained policy backing, institutional strength, market integration and knowledge driven outreach, Gujarat is steadily shaping a farming model that many other states are now beginning to follow.

SCHEMATIC SUPPORT

- Provide assistance to annually 1.5 lakh farmers under the Indigenous Cow Maintenance Scheme to promote natural farming practices based on indigenous cow.
- **Established Model** Farms and **Bio-Resource Centres** across the state Under Integrated Scheme for Natural Farming.
- Declaration of Dang district as completely chemical free, showcasing successful adoption of natural farming Under the scheme of **'Sampurna Rasayan Mukt Dang Jilla'**

Prakrutik Krushi Bharat (PraBha)- A Government-Led Success Story in Sustainable Agriculture

The PraBha Brand has emerged as Gujarat's flagship success in promoting natural farming and marketing its produce. Under government-led initiatives, PraBha became a trusted identity for chemical-free, eco-friendly products, backed by strict certification and farmer training programs.
