

GUJARAT AGRO INDUSTRIES CORPORATION LTD

A Legacy of Trust, Innovation and Nation-Building

Gujarat has steadily advanced a forward looking agricultural vision, and the Gujarat Agro Industries Corporation Ltd has become a key institution in translating this aspiration into reality. The organisation has linked policy intent with technology, scientific processing and export readiness, enabling farmers to participate in international markets with new confidence. In a global landscape where safety, precision and consistency command value, Gujarat Agro ensures that the state's agricultural output meets the highest standards of quality.

A Policy Approach Anchored in Modern Agriculture

Gujarat Agro works with a clearly defined mandate. It aims to accelerate demand led production, raise productivity, reduce wastage, promote value addition and secure better returns for farmers. Equally important is its effort to build strong backward and forward linkages that connect agriculture with industry and export channels. Through this approach, the organisation has created infrastructure that offers scientific processing, efficient storage and global compliance to producers across the state.

Bavla Radiation Processing Facility

The Bavla Radiation Processing Facility stands as the technological flagship of Gujarat Agro. The 1,000 kCi multipurpose unit in Ahmedabad district was established in 2014 with an investment of Rs 20 crore under the Rashtriya Krushi Vikas Yojana, with scientific support from the Bhabha Atomic Research Centre and the Board of Radiation and Isotope Technology. It remains the only facility in India capable of providing low, medium and high dose irradiation for food, agricultural and medical products.

The facility received a major boost in 2022 when the United States Department of Agriculture Animal and Plant Health Inspection Service approved it for export of mango and pomegranate to the United States of America, opening premium global markets that were previously inaccessible.

Salient Features of the Facility

The facility is approved by the Atomic Energy Regulatory Board and the National Plant Protection Organisation and licensed by FSSAI and the Food and Drug Administration for Class A and Class B medical products The unit holds ISO 9001 2015, ISO 22000 2018 and ISO 13485 2016 certifications.

Strengthening Farmer Confidence and Export Capability

Gujarat produces between 150,000 and 200,000 metric tons of Kesar mango annually and Junagadh contributes almost 50 percent. With the Geographical Indication tag awarded in 2011, the fruit enjoys strong global recognition. Irradiation strengthens shelf life, reduces losses and makes the produce export compliant. Recent processed volumes at Bavla include spices rising from 5,030 metric tons to 5,922 metric tons, herbal items from 360 metric tons to 589 metric tons, medical items from 5,340 boxes to 5,459 boxes, mango at 230 metric tons and 223 metric tons and cereals and pulses at 490 metric tons and 384 metric tons.

Cold Chain Expansion and Diversification

The Centre for Perishable Cargo at Ahmedabad Airport, built in 2010 at a cost of Rs 5.42 crore, has four controlled chambers ranging from minus 22 degrees Celsius to 15 degrees Celsius with a daily capacity of 40 metric tons and exports of 664.25 metric tons in 2025-2026.

The Banana Pack House at Jagadia, established in 2009 with APEDA support of Rs 7.42 crore, has a capacity of 405 metric tons and processed 1,661 metric tons in 2024 to 2025 and 795 metric tons in 2025 to 2026 till date.

Conclusion

Through scientific capability, policy discipline and modern infrastructure, Gujarat Agro advances the vision championed by the Hon'ble Prime Minister and guided in the state by the Hon'ble Chief Minister for an Atmanirbhar India. The organisation strengthens farmer confidence, enhances global competitiveness and reinforces India's ambition for self reliance in agriculture and food systems.

Center for Perishable Cargo

Area and Infrastructure
- Land area: 6,750 sq metres
- Built area: 2,368 sq metres

Storage Capacities
- Incoming zone: 700 sq metres with 30 metric tons cold storage
- Outgoing zone: 700 sq metres with 50 metric tons cold storage

Strategic Reach
- Naroda Pack House: 60 km
- Ahmedabad Airport: 50 km
- Pipavav Port: 265 km
- Kandla Port: 292 km
- Mundra Port: 335 km
- Mumbai: 555 km

Processing Performance
- Conveyor handling: 80 boxes per hour
- Mango irradiation throughput: 6 metric tons per hour
