India's First State Semiconductor Policy: The First Mover Advantage

In 2022, Gujarat took a bold step that changed the national semiconductor narrative. It launched India's first dedicated State Semiconductor Policy, sending a clear signal to the world that Gujarat was ready, prepared and serious. The policy was aligned seamlessly with the India Semiconductor Mission.

Within a remarkably short span, Gujarat attracted four landmark semiconductor investments worth ₹1.24 lakh crore, featuring global and national industry leaders such as Micron Technology, Tata Electronics, CG Semi and Kaynes Semicon.

Together, these four strategic semiconductor projects are expected to generate more than 47,000 direct and indirect employment opportunities, significantly strengthening Gujarat's industrial workforce while creating high value jobs across manufacturing, engineering, logistics and allied services.

Each investment brings its own strategic weight, ranging from memory packaging and testing to compound semiconductors and OSAT capabilities, gradually stacking Gujarat's ecosystem across the full semiconductor value chain.

The Taiwan Desk and Global Circuitry

Understanding that semiconductors are as much a cultural industry as a technological one, the Government of Gujarat established a dedicated Taiwan Desk in Taipei, a strategic move in semiconductor engagement. The desk offers real time handholding in Mandarin and English, builds trust with Taiwanese firms and guides investors through India's regulatory architecture.

The Department of Science and Technology and GSEM, Government of Gujarat, has led strategic international roadshows and investment promotion programmes across Japan, Taiwan, Belgium, the United States and South Korea, positioning Gujarat not as a new entrant but as a ready, plug and play destination for semiconductor and electronics manufacturing.

From Chips to Orbits: Gujarat's SpaceTech Ambition

In April 2025, Gujarat added another defining dimension to its technological ambition with the launch of the SpaceTech Policy for 2025 to 2030. The targets are ambitious yet grounded: USD 5 billion in investments and 25,000 new jobs within five years. The Government of Gujarat's participation at the Global Conference on Space Exploration GLEX 2025 brought the state into direct dialogue with leading space manufacturers, startups and systems integrators. With more than 29 high level one to one meetings and focused roundtables, Gujarat's space ecosystem moved decisively from vision to actionable partnerships.

Here again, the strategy reflects Gujarat's manufacturing DNA: precision engineering, systems integration and sustainability driven production.

Electronics Components: Fixing India's Weakest Link

India's electronics story has long been constrained by its dependence on imported components. The State Government addressed this gap head on with the Electronics Component Manufacturing Policy launched in June 2025.

The ECMS Roundtable, chaired by Gujarat's Minister for Science and Technology, provided the sector with something rare: a policy table where manufacturers directly shaped future interventions. From PCB fabrication and display assemblies to advanced passive components, Gujarat is now working to domesticate the most critical building blocks of India's digital economy.

Semiconnect: Where Gujarat Became the Global Hub

If policy is architecture, platforms are its amplification. The Gujarat Semiconnect Conference has steadily evolved into one of India's most influential deep tech convenings, reflecting the growing confidence of the global semiconductor industry in Gujarat's ambitions.

What began as an initiative of the Government of Gujarat has matured into an international platform bringing together manufacturers, designers, equipment makers, academics, investors and policymakers under one roof.

The 2024 edition drew over 1,100 delegates from industry, academia and global trade bodies. Building on this momentum, Semiconnect 2.0, organised in collaboration with SEMI, IESA and IDSPS, expanded dramatically to over 2,500 participants, placing Gujarat firmly on the global semiconductor conference map.

These gatherings are not merely ceremonial showcases. They are working platforms where technology partnerships take shape, investment conversations mature and government to business engagements move forward with clarity and intent.

Foundation of Tomorrow's Silicon Economy

Semiconductors are not built by concrete alone. They are built by people. The State Government's workforce vision recognises this truth with long term clarity. At a time when the global semiconductor industry faces an acute talent shortage, Gujarat has chosen to treat human capital as core infrastructure.

Hon'ble Minister, Gujarat Shri Arjun Modhwadia addressing the audience during a conference in Gandhinagar.
